# history

1973:

the first Allmatic – vice left our factory.  
With a high pressure spindle and a  
pure mechanical power intensifier.

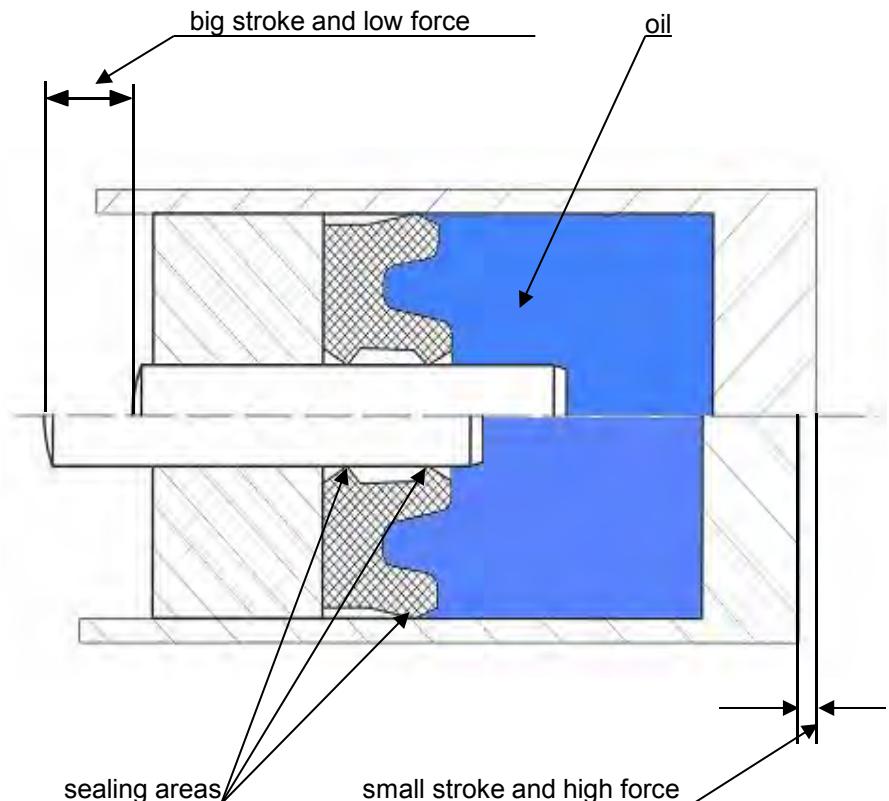

Nearly all Allmatic–vices – till this day –  
have a spindle with a built-in mechanical  
power intensifier.

# Power intensifier – the heart of the spindle

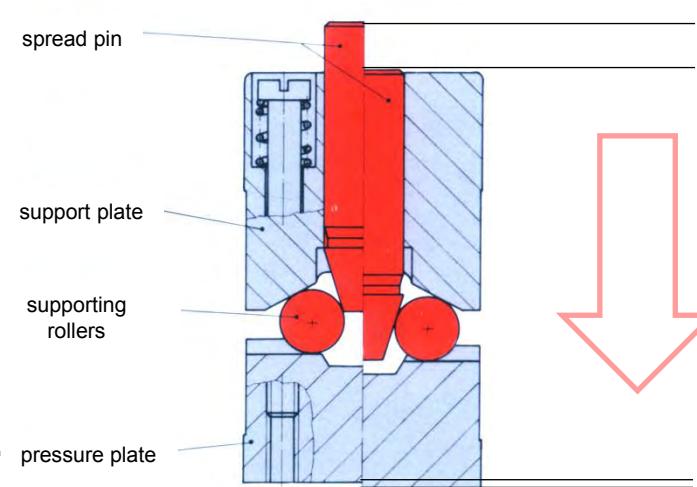

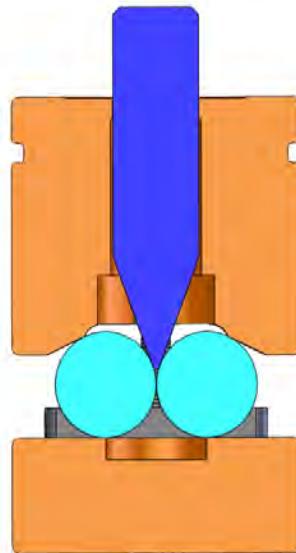

hydraulic version – built in from many manufacturers

The available space in the high pressure spindle is limited.

In order to get sufficient clamping force a very high internal pressure is necessary (500 – 600 bar). The reliability of the spindle depends from the (limited) lifespan of the sealings.

# mechanical power intensifier

big stroke and low force

ratio of power

small stroke and big force  
=  
**power stroke**

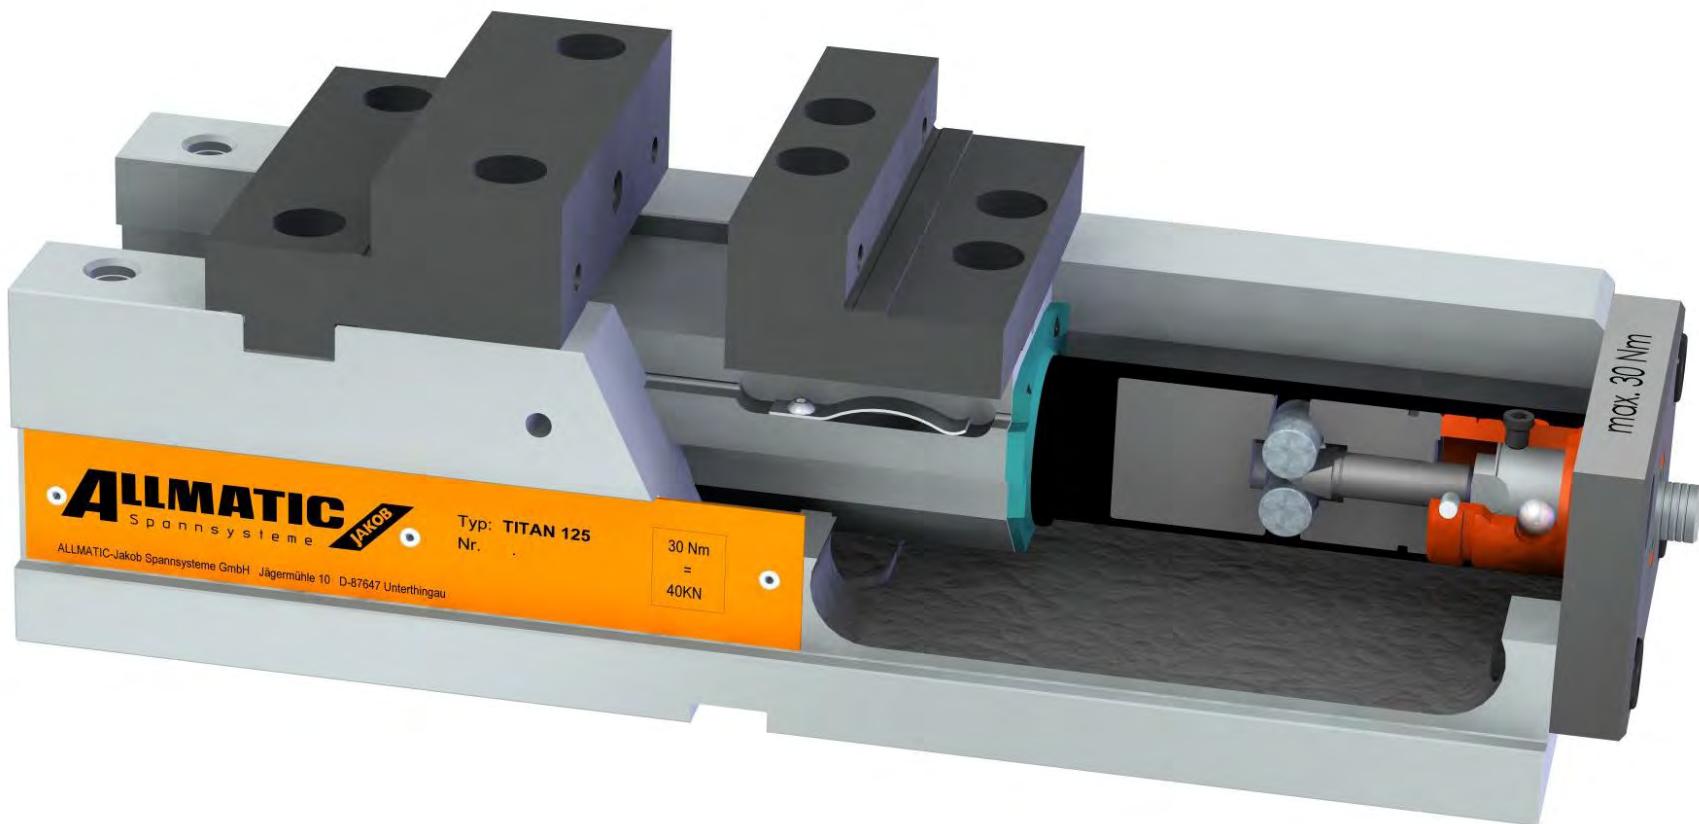

# mechanical power intensifier

**ALLMATIC**  
Spannsysteme JAKOB

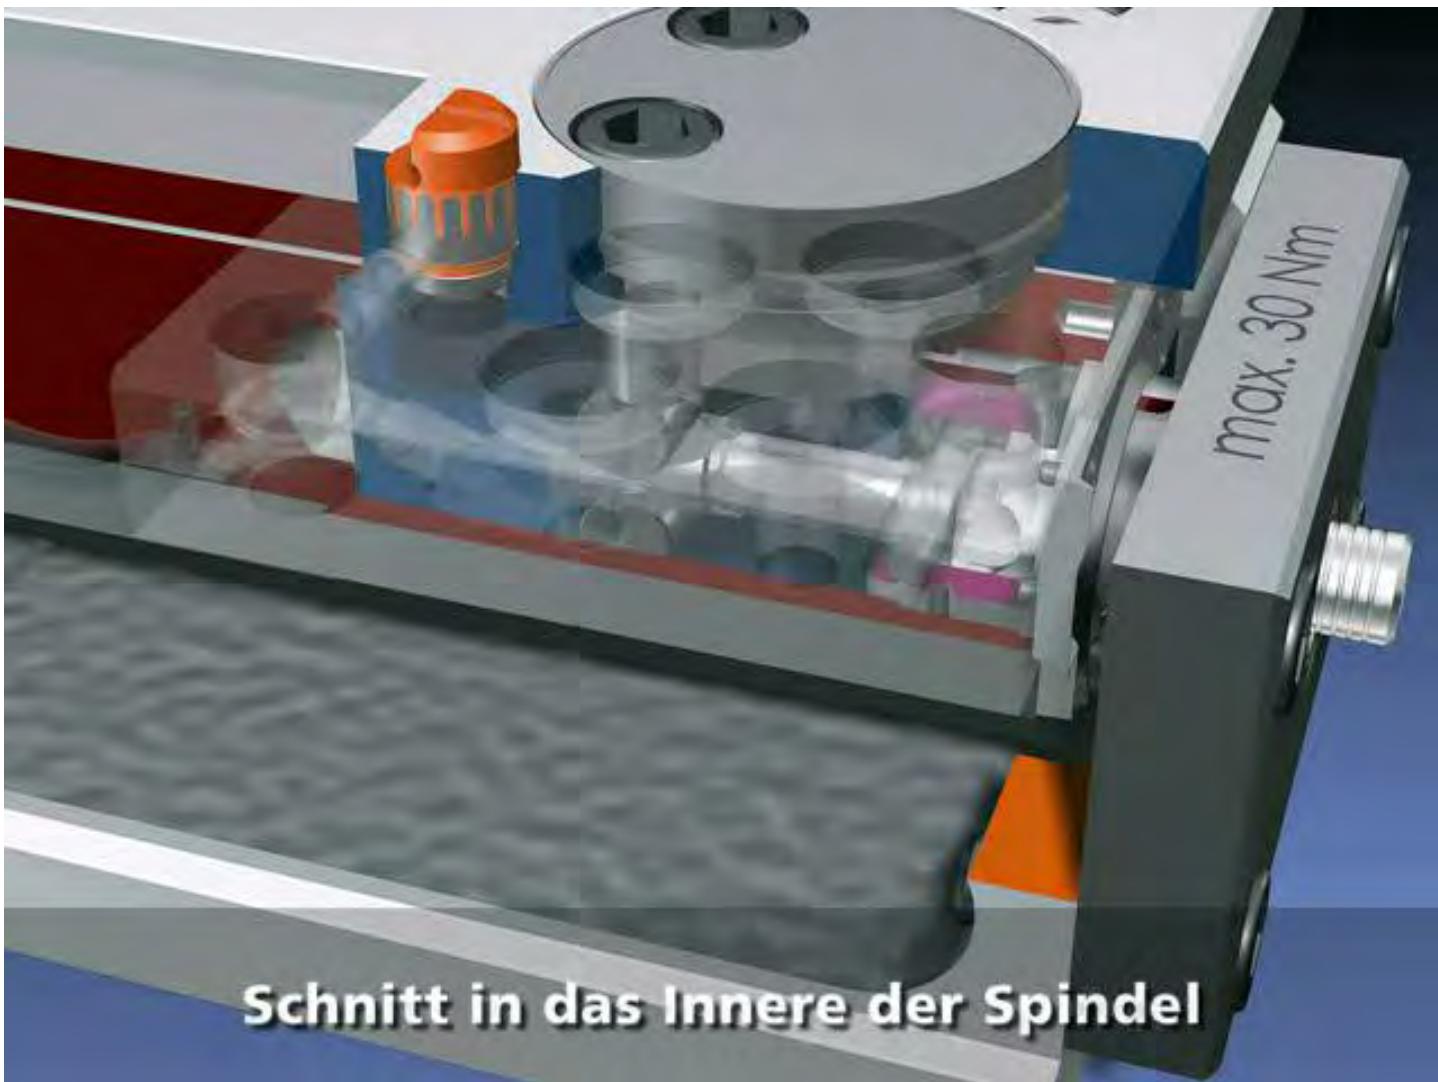

- pure mechanical system
- power stroke up to 4,3 mm
- maintenance free

# Function: mechanical high pressure spindle

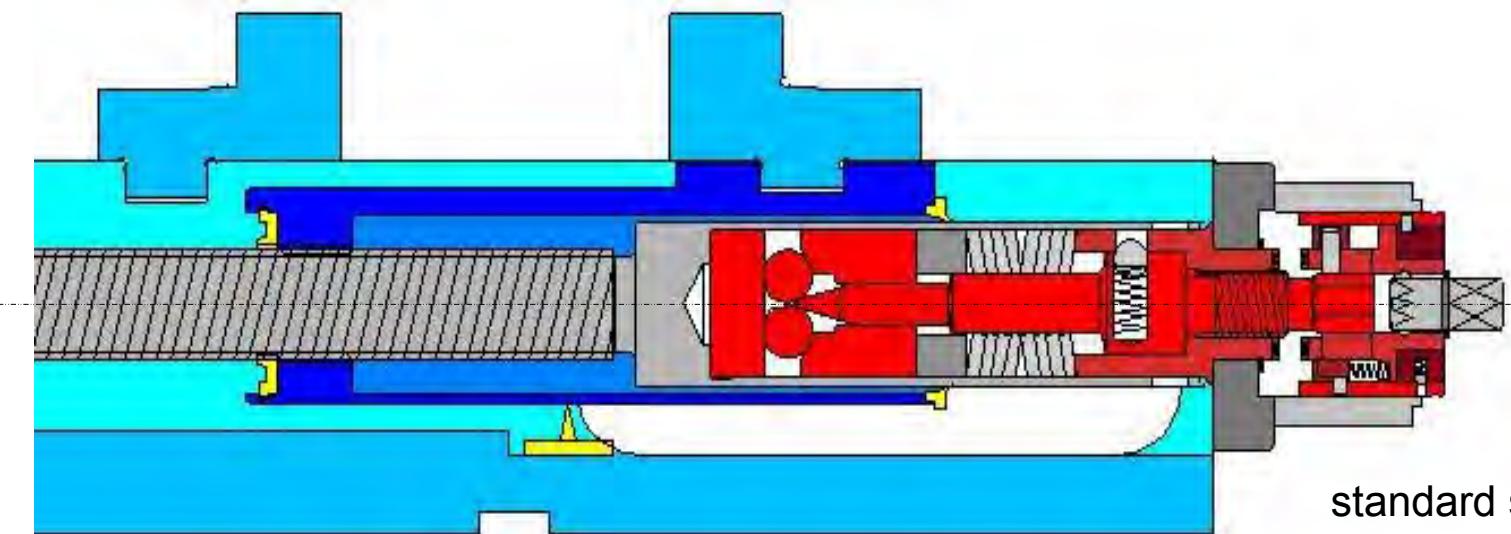

# Function: mechanical high pressure spindle

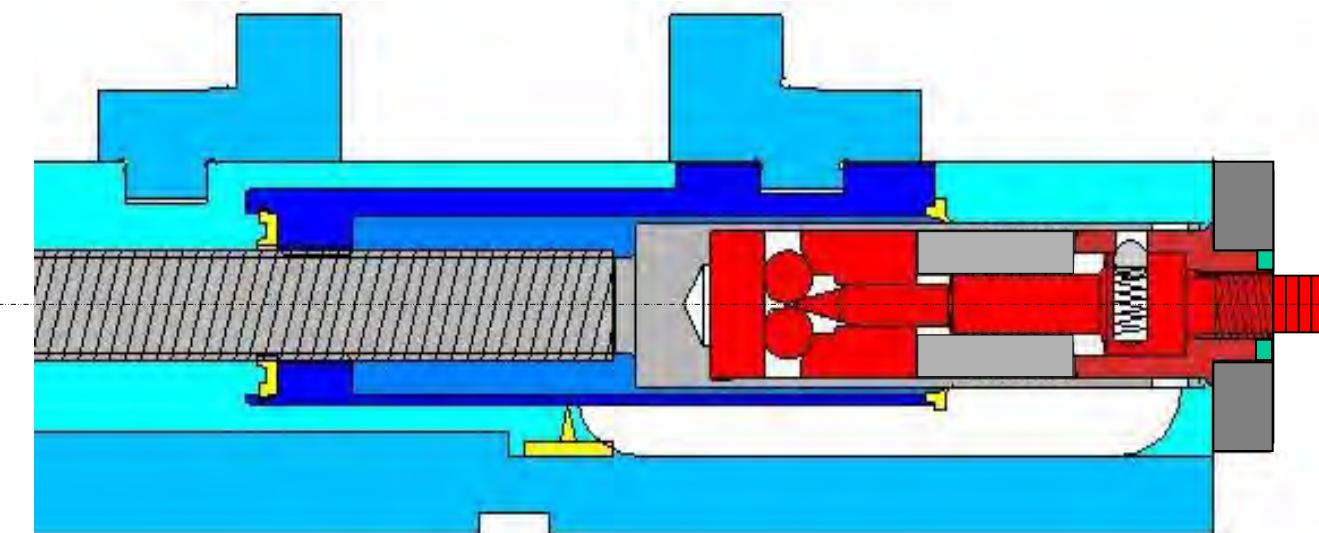

**ALLMATIC**  
Spannsysteme  
JAKOB

# mechanical high pressure spindle

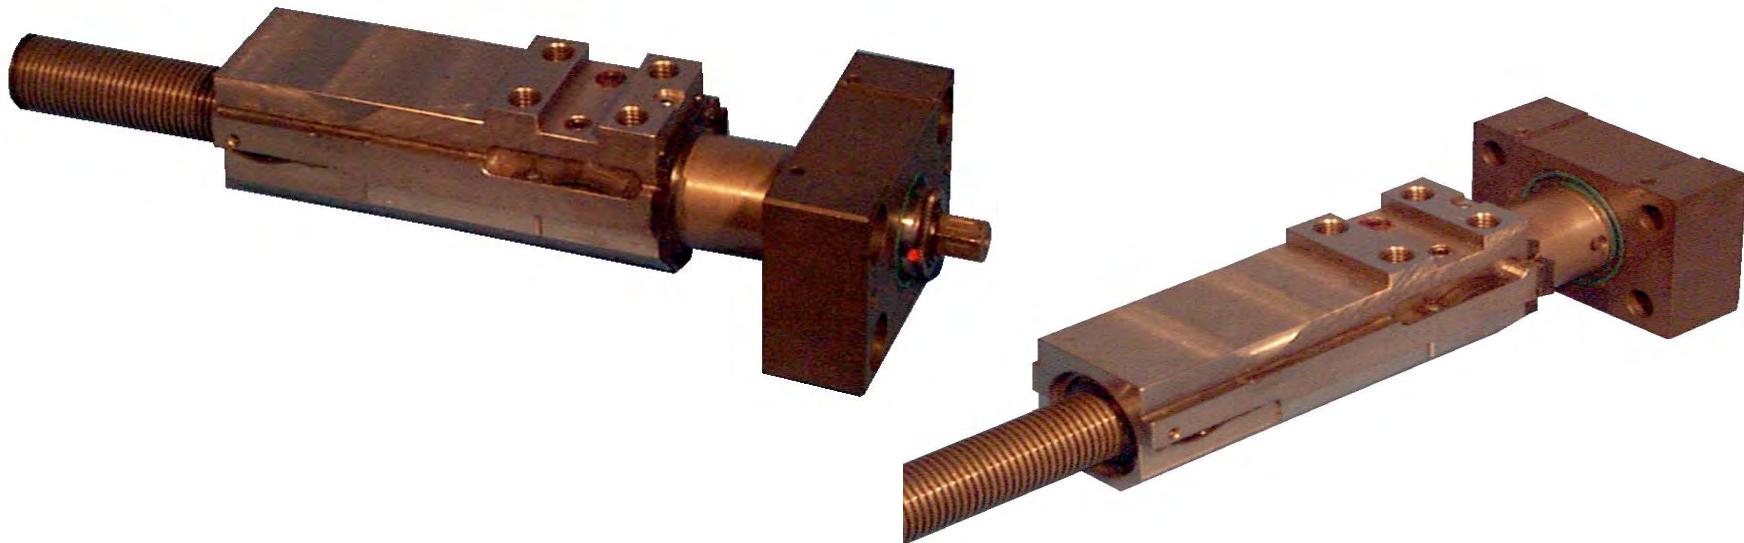

standard spindle

grip spindle

# ALLMATIC - spindle protection

sealings all around the spindle guarantee  
troublefree use of the vice

# pressure setting

1: conventional spindle: operation with handle. Pulling and rotating the adjusting sleeve or rotating the adjusting ring with an allen key. Controlled clamping is guaranteed by an integrated dead stop.

Max. clamping pressure	kN	pressure setting
------------------------	----	------------------

type		
------	--	--

NC 70	20	11
LC/TC 90	28	11
LC/TC 125	40	4
LC/TC 160	60	4
LC 200	60	4
TC 200	80	4
NC DUO 90	28	6
HD 100	30	2
HD 125	40	4
HD 160	60	4

2 : high pressure spindle with grip technologie : No pressure setting. Clamping pressure can be adjusted continuously with the torque wrench.

# Allmatic range

# ALLMATIC LC/TC application

FFS	BAZ - H	Universal-WZM	BAZ - V	conventional milling machine
NC Single TC				
		NC Single LC + (TITAN 2)		

# ALLMATIC LC/TC differences

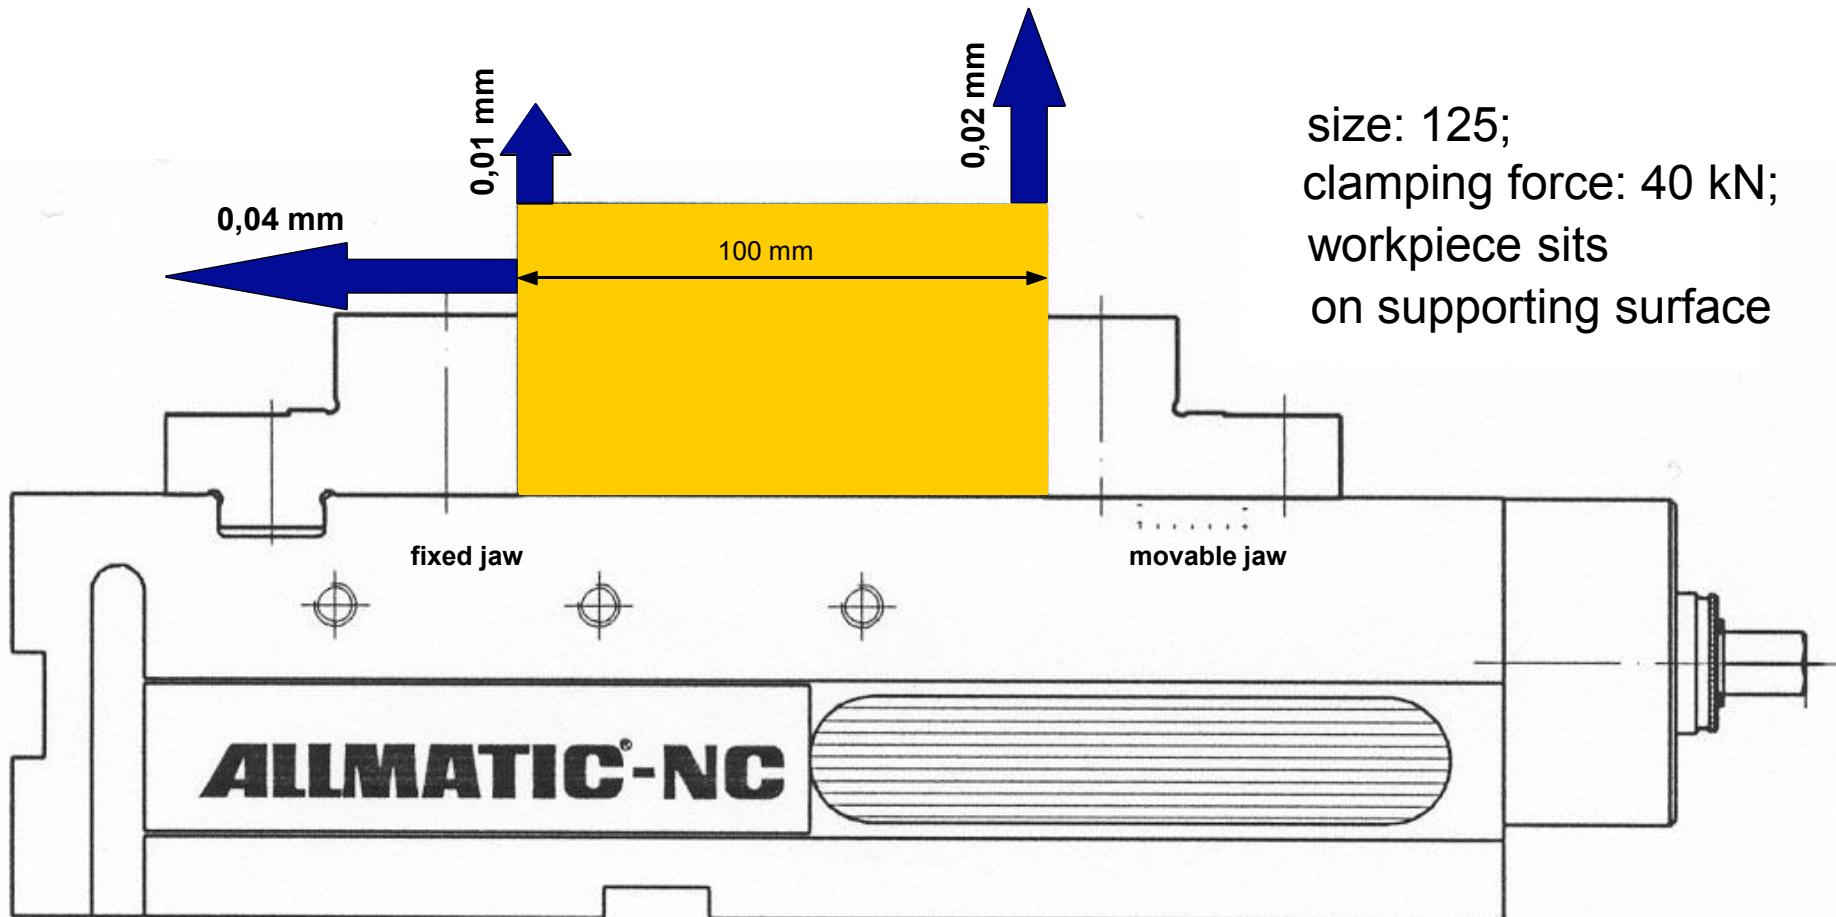

**base:** • both sides fine milled (right angle 0,1)

**face:** • front side fine milled without threads

**threads for  
workpiece stop :** • both sides 1 thread for workpiece stop

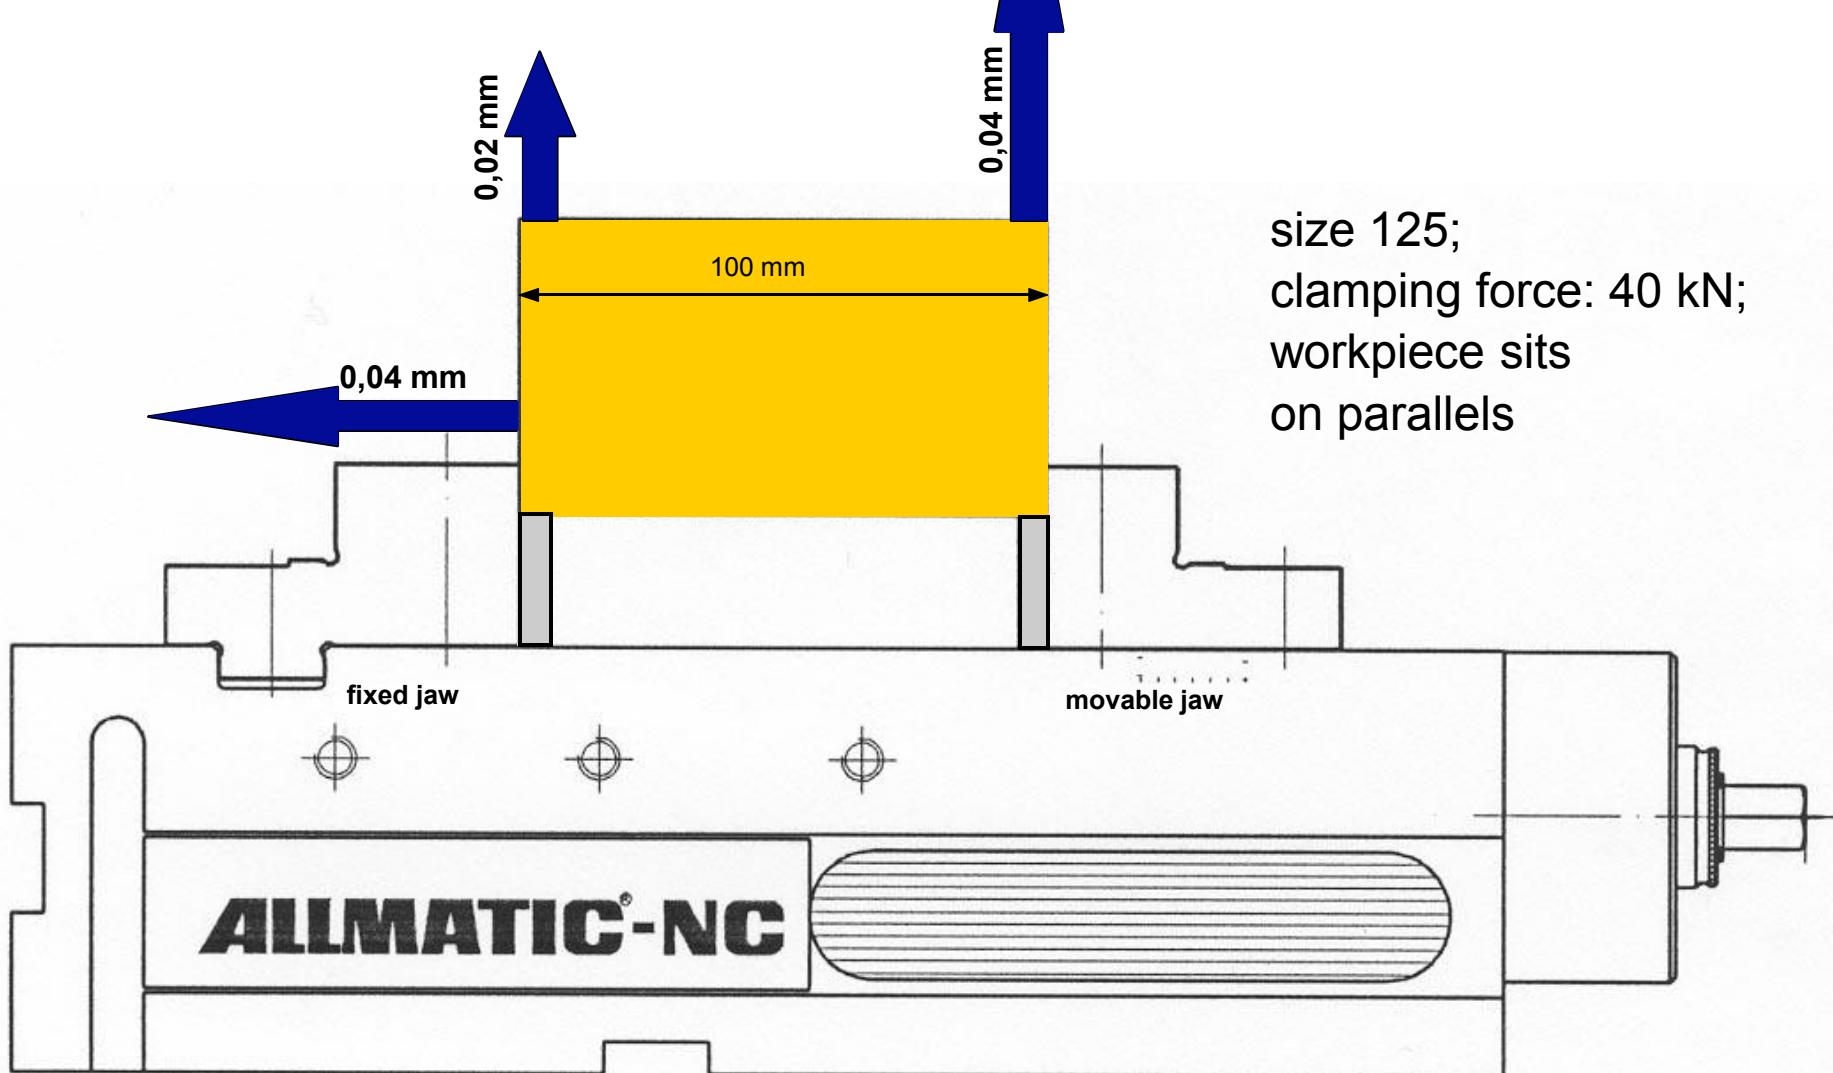

- fine milled on all faces (right angle 0,02)
- usable in each position
- 2 holes sideways to fit the vice on both sides to the machine table (size 90 + 125)
- fine milled with 2 locating holes and fitting threads
- both sides 3 threads (width 90), 4 (width 125 and 160)

# Clamping accuracy ALLMATIC LC/TC/TITAN high pressure vice

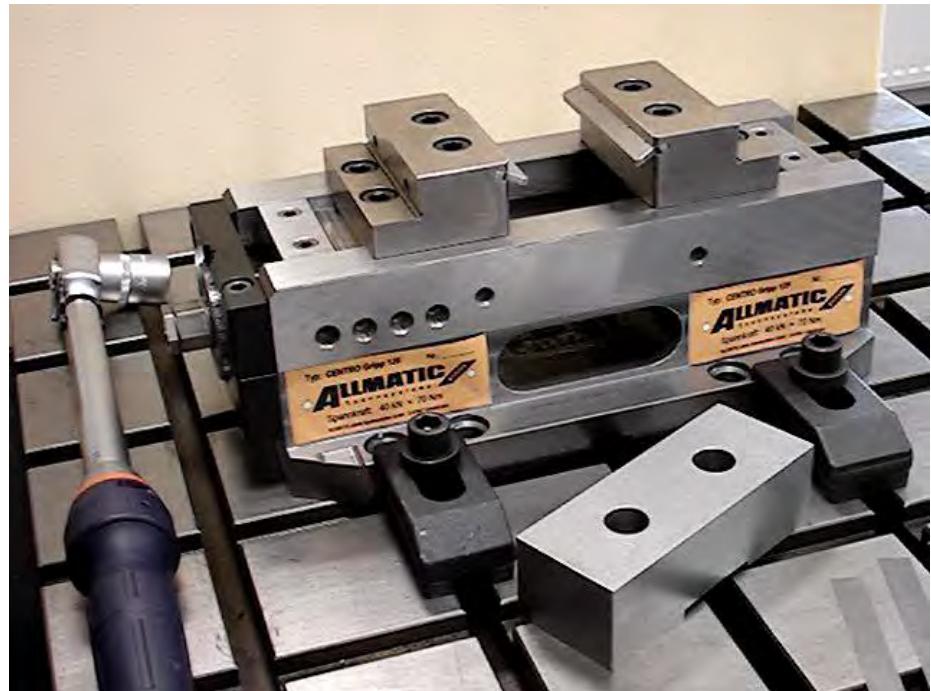

# Clamping accuracy ALLMATIC LC/TC/TITAN high pressure vice

**ALLMATIC**  
Spannsysteme  
JAKOB

# Pull down jaws

Pull- down jaws are used in order to pull down the workpiece to the supporting surface. The top side of the component is then absolute parallel to the machine table or the vice support surface. Hardened and precise ground spring leaves serve the purpose. No damage is seen at the workpiece (material: steel). Spring leaves are exchangeable with 1 – click.

# **Universal vice with grip technologie**

Grip technologie is used more and more in addition to the conventional technologie. The application spectrum of high pressure vices is clearly extended.

# summary technologie grip

Titan 2 K,M,L

DUO Plus

CENTRO

# High pressure vices for 5 – axis machine tools

## T – Rex + CENTRO-Gripp customer demand

- **5 – sided machining on modern 5 – axis machine tools**
- **safe and quick clamping of different materials and surfaces: e.g. steel, cast-iron, aluminium with sawn and not parallel surfaces**
- **optimal accessibility to the workpiece with the tools and as little as possible restriction concerning the clamping device**
- **best utilisation of the available workspace = a lot of space for the workpiece**

# T - Rex

Solid high pressure vice with  
fixed jaw and movable pivot  
jaw (no centric function)

## Function:

Clamping of raw parts, thermal cut parts and sawn off material is possible in only one step by embedding of hardened and exchangeable gripper studs into the surface of the workpiece.

Allmatic achieve this with a special high pressure spindle with mechanical power intensifier. The spindle is operated with a torque wrench (max. 2 turns or 30 Nm torque).

# **Competitor system: Lang stamping system**

1. Pre-stamping of workpiece with external hydraulic pressure.
2. Clamping of workpiece using the pre-stamped marks.

Pictures from Lang system are removed  
copyright reason

# Grip jaws for T- Rex

- **fixed version**

- **movable version**

with incorporated pivot function

necessary to compensate parallel faults (rough material or flame cut material)

- **fixed version**

- **movable version**

with incorporated pivot function

necessary to compensate parallel faults (rough material or flame cut material)

# Grip inserts

- grip insert for universal set

- grip insert with 2 teeth

grip height 3,0 – 4,5 mm or

grip height 4,5 – 6,0 mm

- grip insert round with teeth

support height of workpiece 6,0 mm

# Grip insert

- **grip insert with 4 teeth**

special for soft material e.g.  
aluminum

grip height 4,5 – 6,0 mm

- **grip insert with carbide insert**

for clamping of high- strength material

- **grip insert smooth**

for clamping of premilled components  
(no visible marks)

# Universalset „Gripp“

## Multi-part complete system

consisting of:

- grip insert
- gripper stud mounting
- support elements
- washers and screws

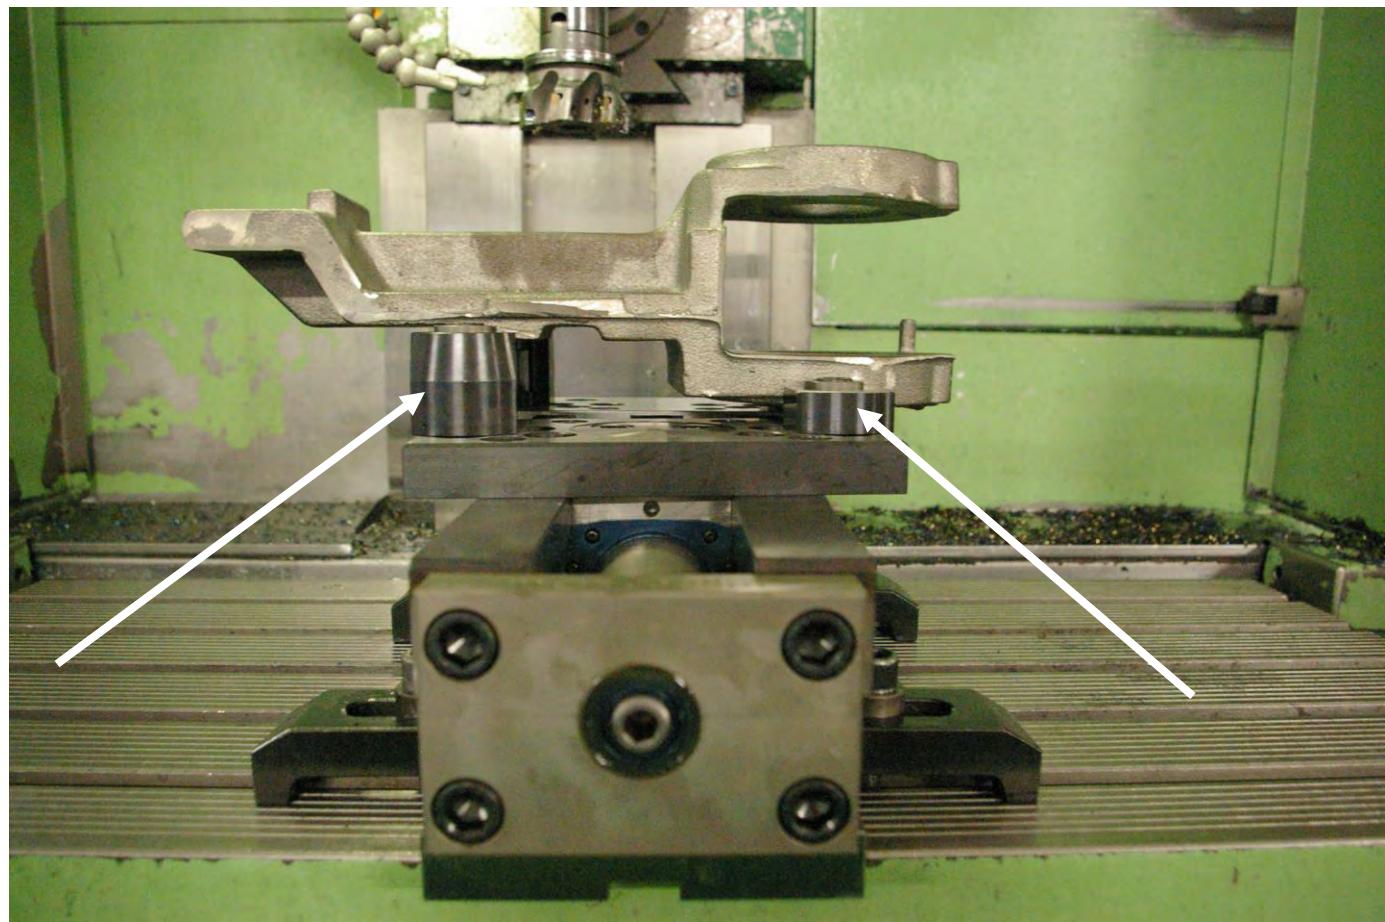

## delivery:

complete in a stable plastic box

## example of use

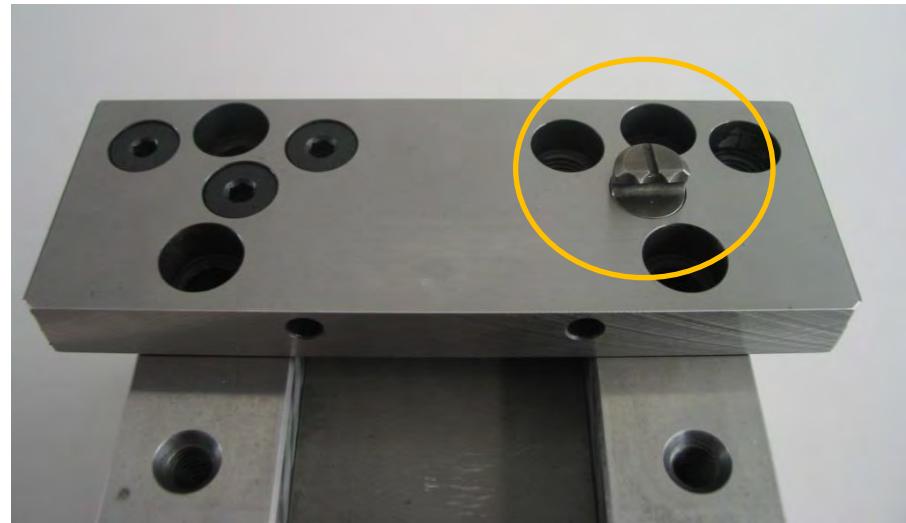

# T - Rex

The studs are screwed.

Therefore the jaws can be adapted very quick to different workpiece dimensions.

The wear of the studs is minimal.

Material: hardened tool-steel

# Grip technologie

Visible marks guarantee safe clamping

# Grip technologie

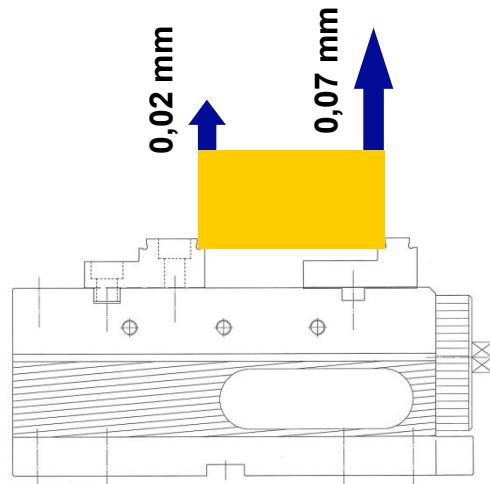

usable for material:

- till strength of material  
approx. 1000 N/mm<sup>2</sup>
- till hardness of material  
approx. 35 HRC

# CENTRO – grip vice

Compact high pressure vice with 2 movable jaws and spindle nuts = centric function

# CENTRO- grip

## **basic:**

The CENTRO- grip is a vice in the product range 'universal compact vice' and related to the T- Rex vice.

All jaws (movable version) and all accessories incl. grip inserts are the same and usable for both products.

Additional functions of the vice are very interested for many users.

## key-points:

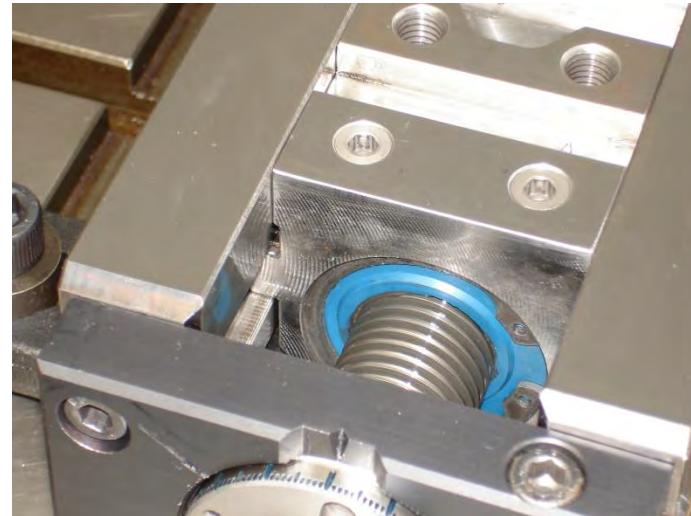

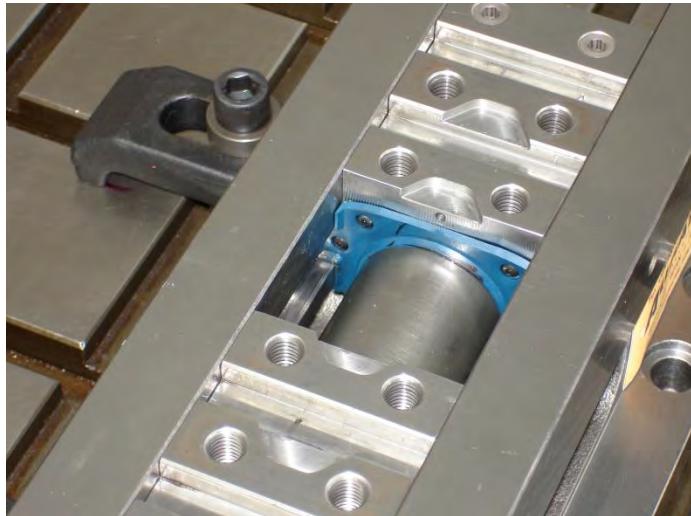

- compact dimensions – perfect to fit on round machine tables Ø 320 mm
- high pressure spindle – high clamping pressure and secure clamping
- centric function with 2 movable jaws – workpiece is always in the middle of the round machine table
- high clamping accuracy – guarantee for precise machining
- grip vice – finishing of a workpiece in only 1 operation
- precision vice – suitable to clamp sensitive workpieces (clamping pressure adjusting)
- flexibility – different kind of jaws are available

# CENTRO- grip

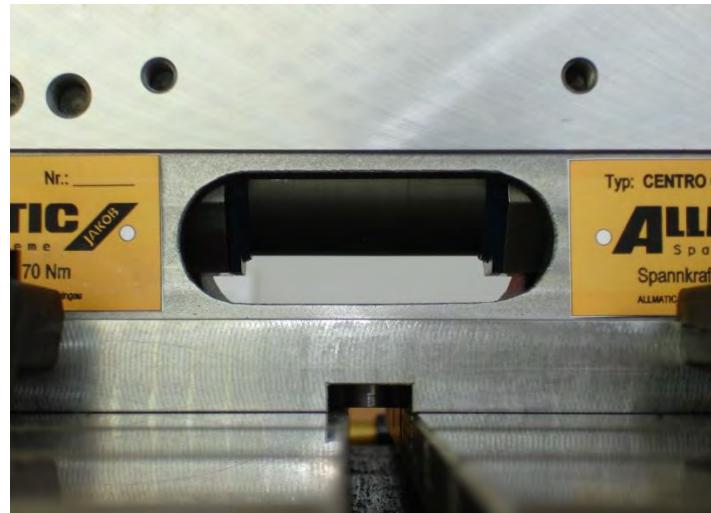

**ALLMATIC**  
Spannsysteme JAKOB

# CENTRO- grip

Totally sealed high pressure spindle and a base with big openings on each side prevent chip jam, troubles and mal functions

# CENTRO- grip

disassembling of  
the spindle is  
done quick and  
easily.

# CENTRO - grip

## operation:

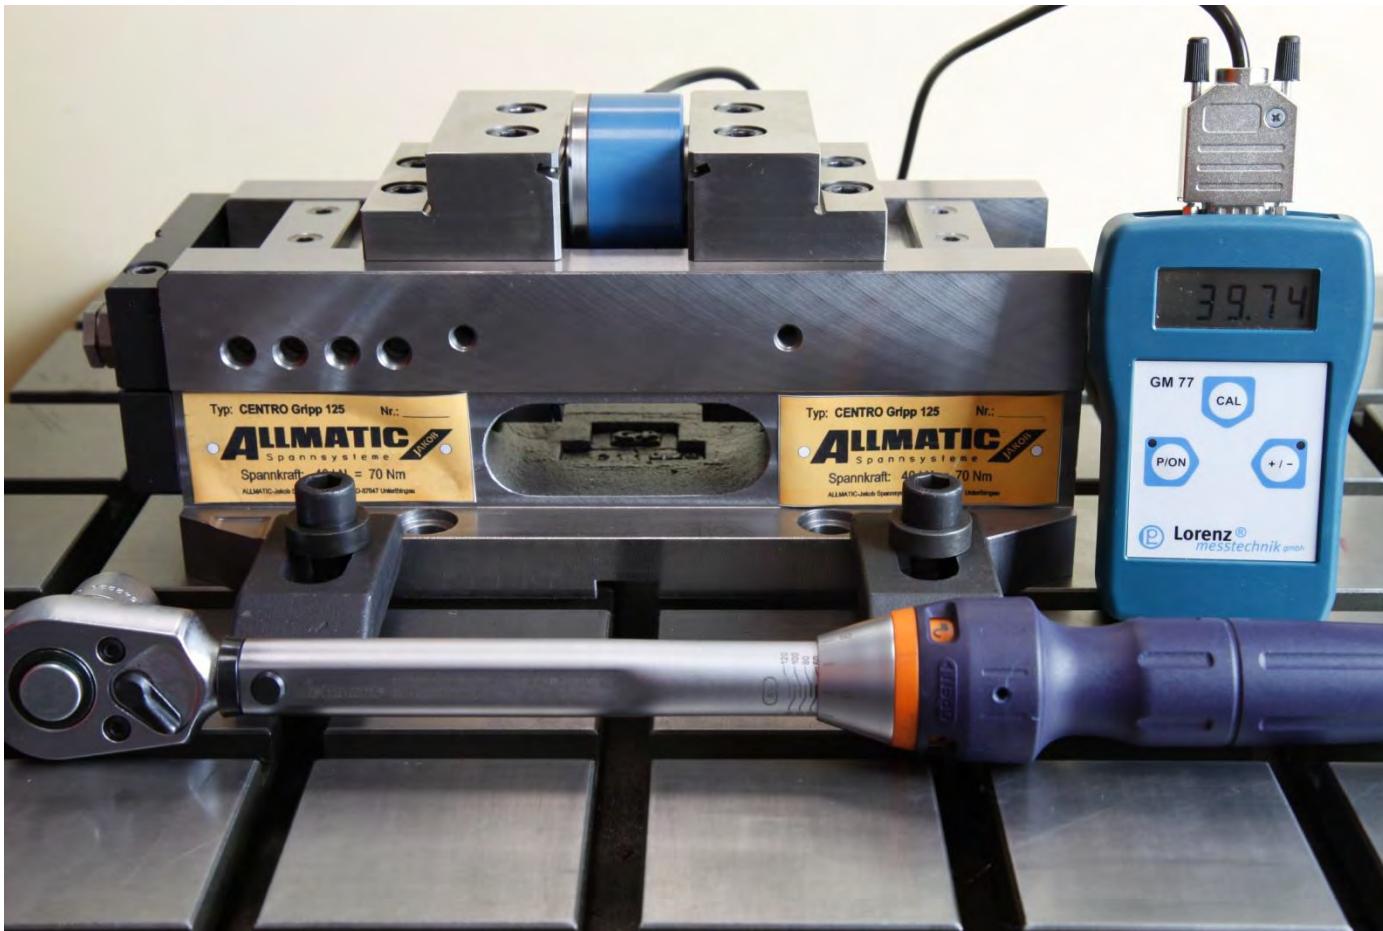

- with adjustable torque wrench (18 – 70 Nm)
- torque wrench is not included in the basic scope of supply.

Please order separately.

# CENTRO - grip clamping pressure

maximum clamping pressure: 40 kN at torque 70 Nm

# CENTRO - grip clamping pressure

only for personal use

## Clamping pressures are proportional to the preselected torque

minimal clamping  
pressure: ca. 3 kN =  
without power intensifier

clamping of parallel  
premilled workpieces:  
maximal rotation angle  
with wrench up to the  
max. clamping pressure:  
approx. 60 degrees

clamping of rough  
workpieces: maximal  
rotation angle with wrench  
up to the max. clamping  
pressure: approx. 320  
degrees

# CENTRO - gripp clamping accuracy

Only for personal use

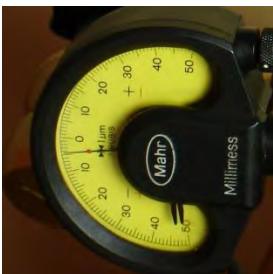

clamping pressure: 40 kN at 70 Nm torque

lifting of the workpiece:

left: 0,04 mm

right: 0,035 mm

from center: < 0,01 mm

# CENTRO - gripp clamping accuracy

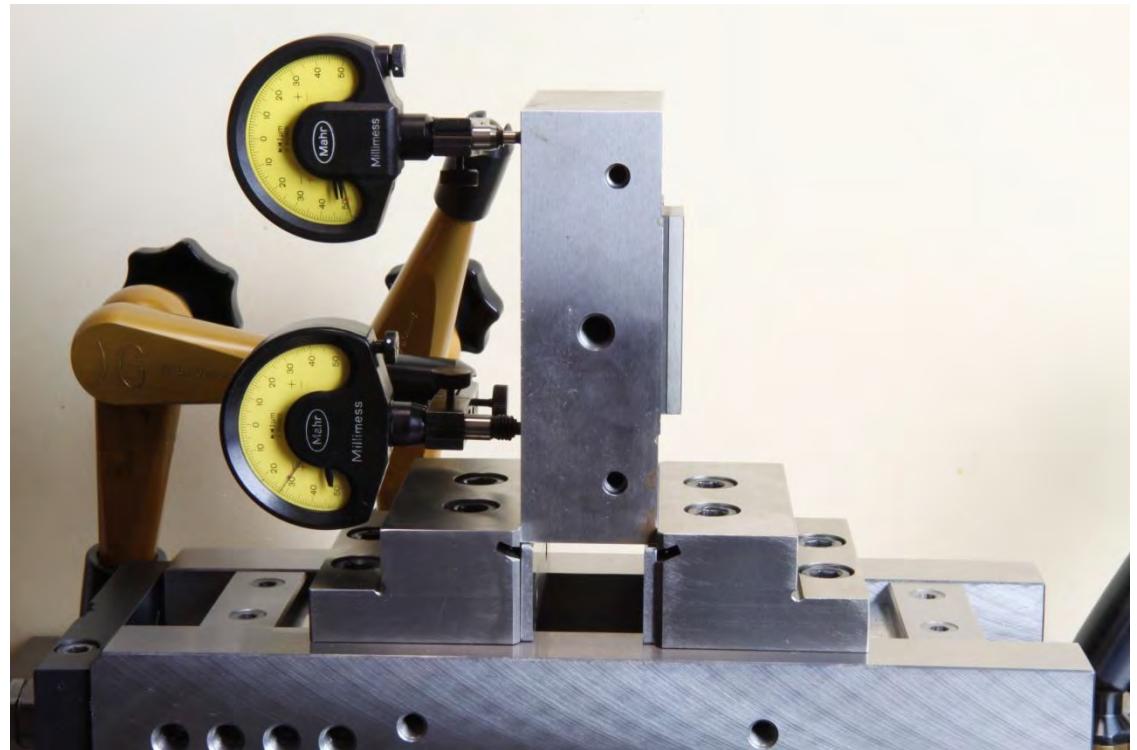

Only for personal use

**ALLMATIC**  
Spannsysteme JAKOB

clamping pressure: 40 kN at 70 Nm torque

deflection on top:  
0,05 mm

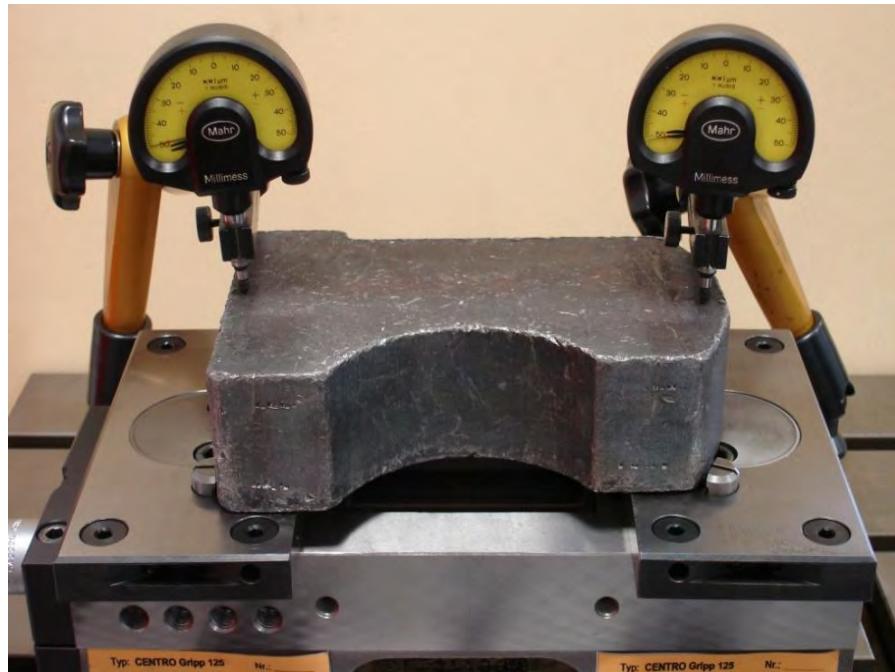

deflexion on bottom:  
0,03 mm

# CENTRO - grip clamping accuracy

Only for personal use

clamping pressure: 40 kN at 70 Nm torque

# CENTRO - grip clamping accuracy

Only for personal use

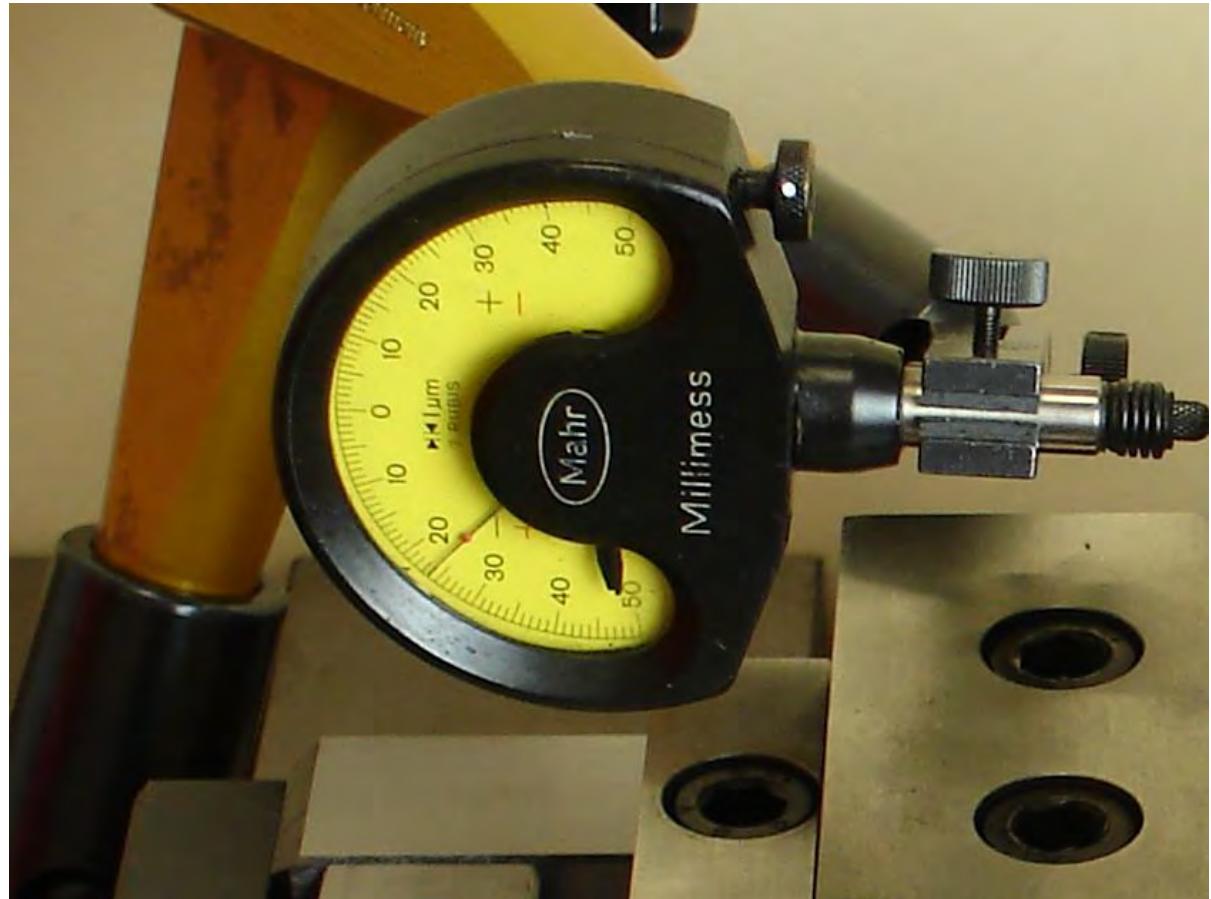

clamping pressure: 40 kN at  
70 Nm torque

jaws: stepped jaws high side

workpiece: width 78 mm,  
parallel ground

workpiece support: parallels  
height 29 mm

deflexion sideway is  
approx. 0,02 mm with  
max. clamping  
pressure

# CENTRO - grip clamping accuracy

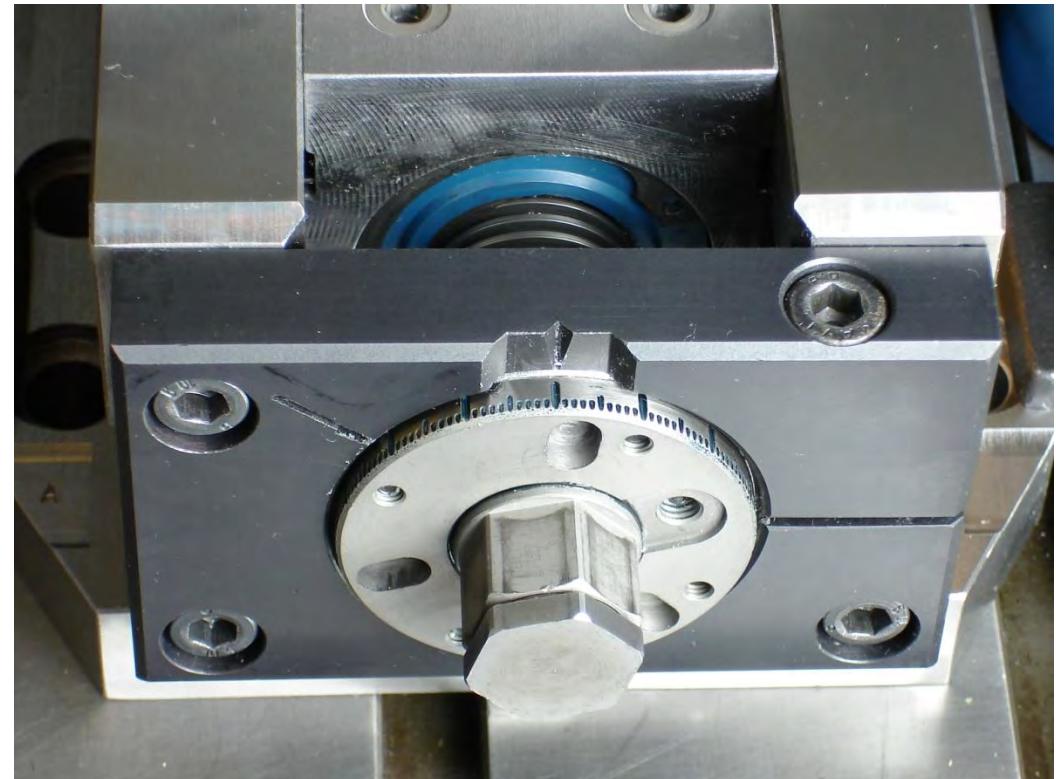

Only for personal use

The center position of the workpiece is identical with the positioning hole in the base.

the center can be  
adjusted with the  
adjustment wheel after  
untightening the  
clamping screw

10 tick marks = 0,1 mm

base setting (factory):  
exact in the center

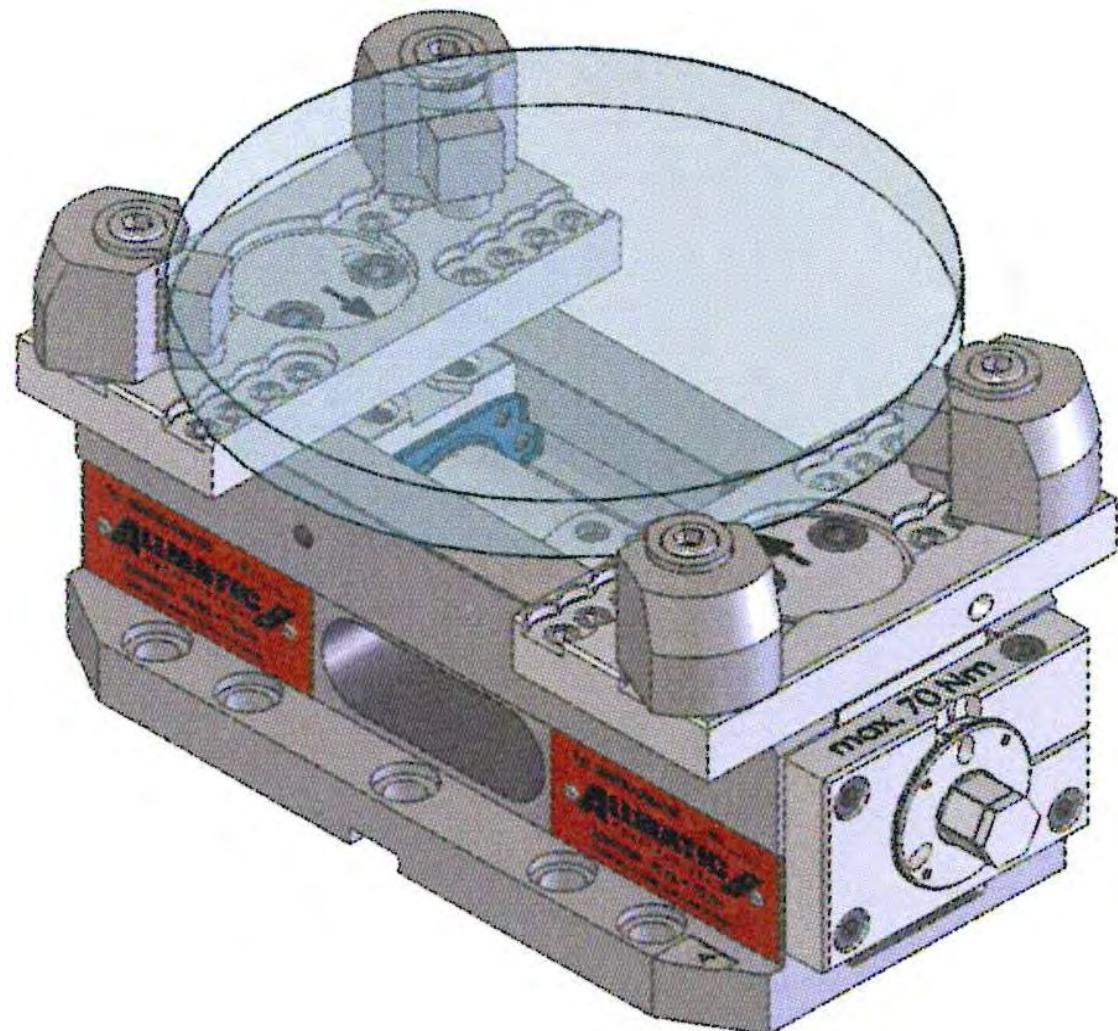

# CENTRO- grip jaws

**ALLMATIC**  
Spannsysteme

JAKOB

suitable jaws are available  
for many applications.  
Normally all are in stock  
Clamping range up to 256  
mm is possible.

# CENTRO - grip

## scope of supply:

- CENTRO- gripp 125  
(without jaws)
- allen key Gr. 6
- allen key Gr. 8
- 12-point socket SW 20 ½"
- 2 ring spanner SW 20
- 6 fitting screws

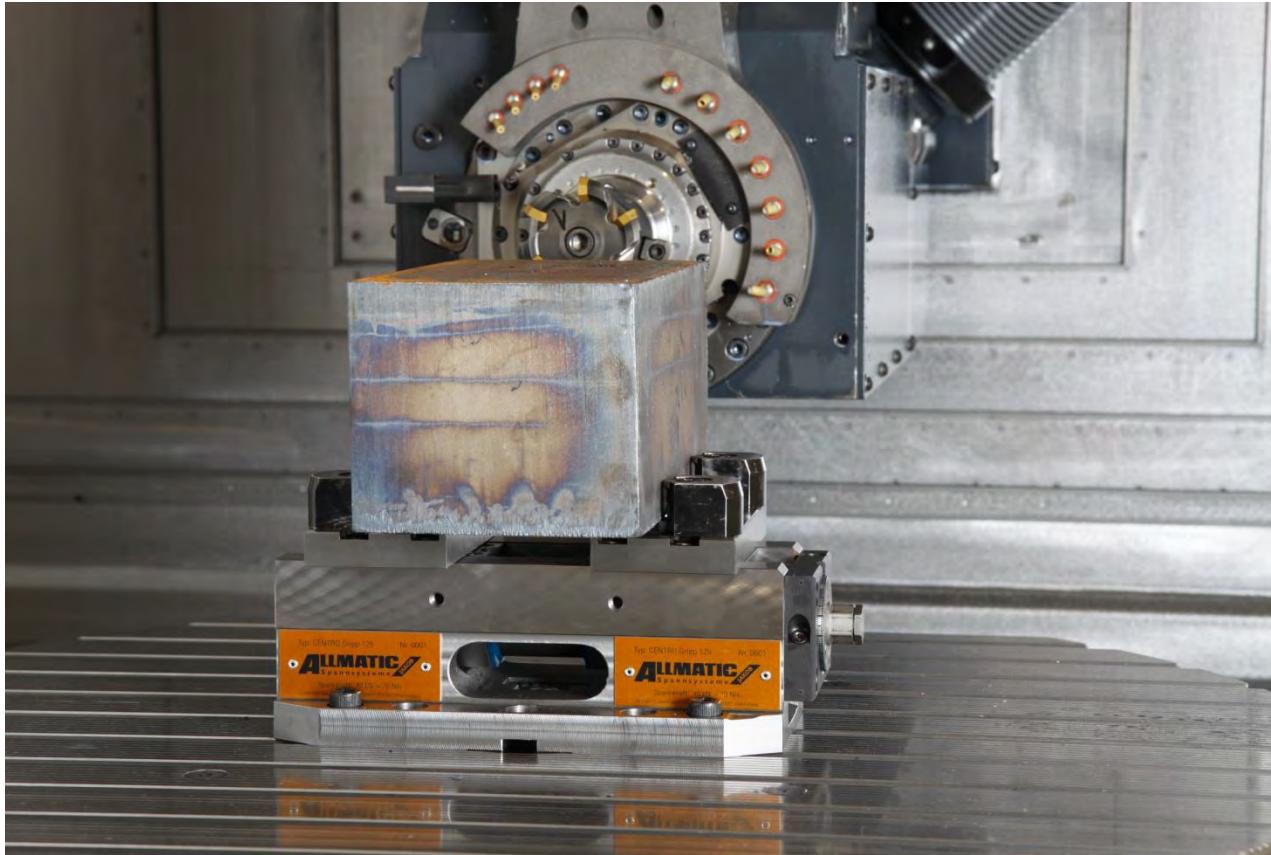

# CENTRO - grip

**ALLMATIC**  
Spannsysteme

## application:

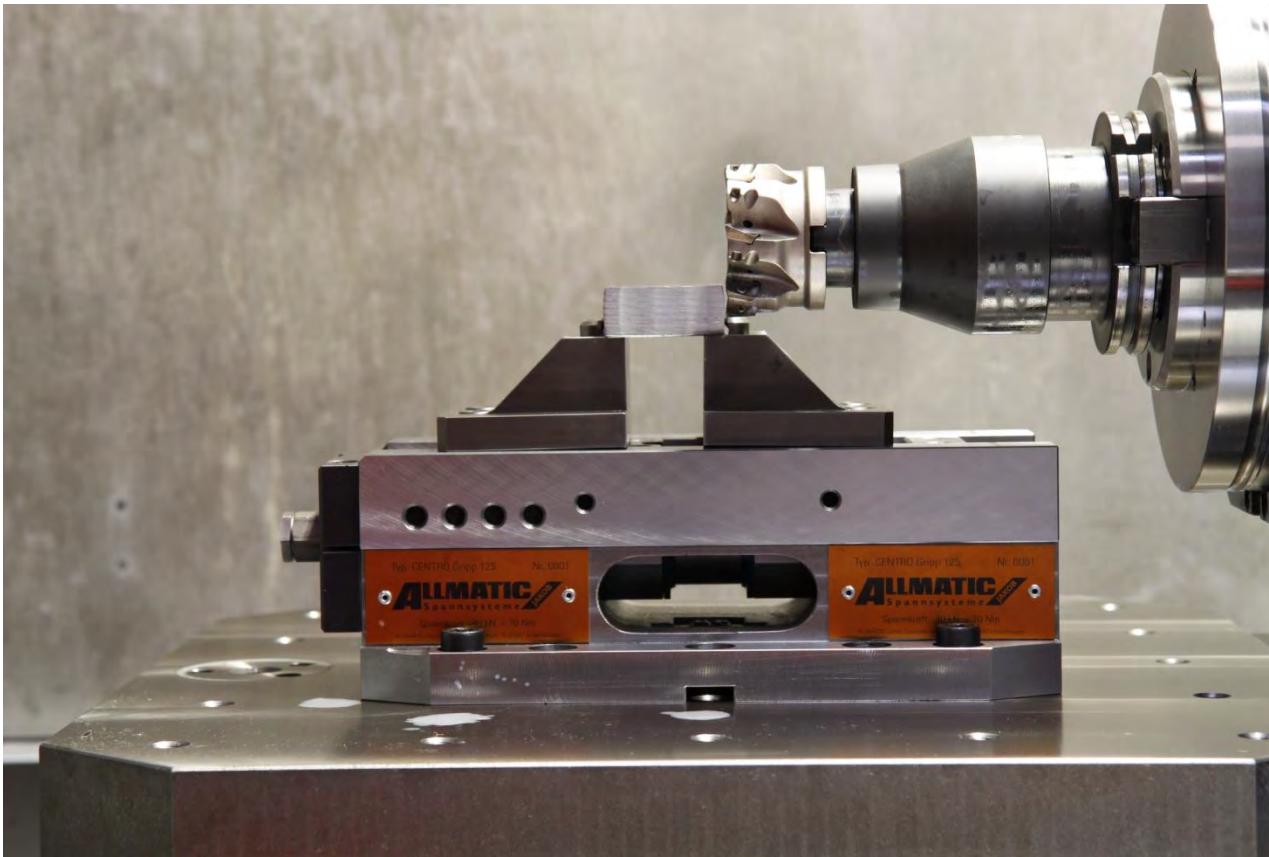

# CENTRO - grip

**ALLMATIC**  
Spannsysteme

JAKOB

## application:

**CENTRO - grip**

**ALLMATIC**  
Spannsysteme

JAKOB

**application:**

# Advantage/disadvantage T-Rex / Centrogrip

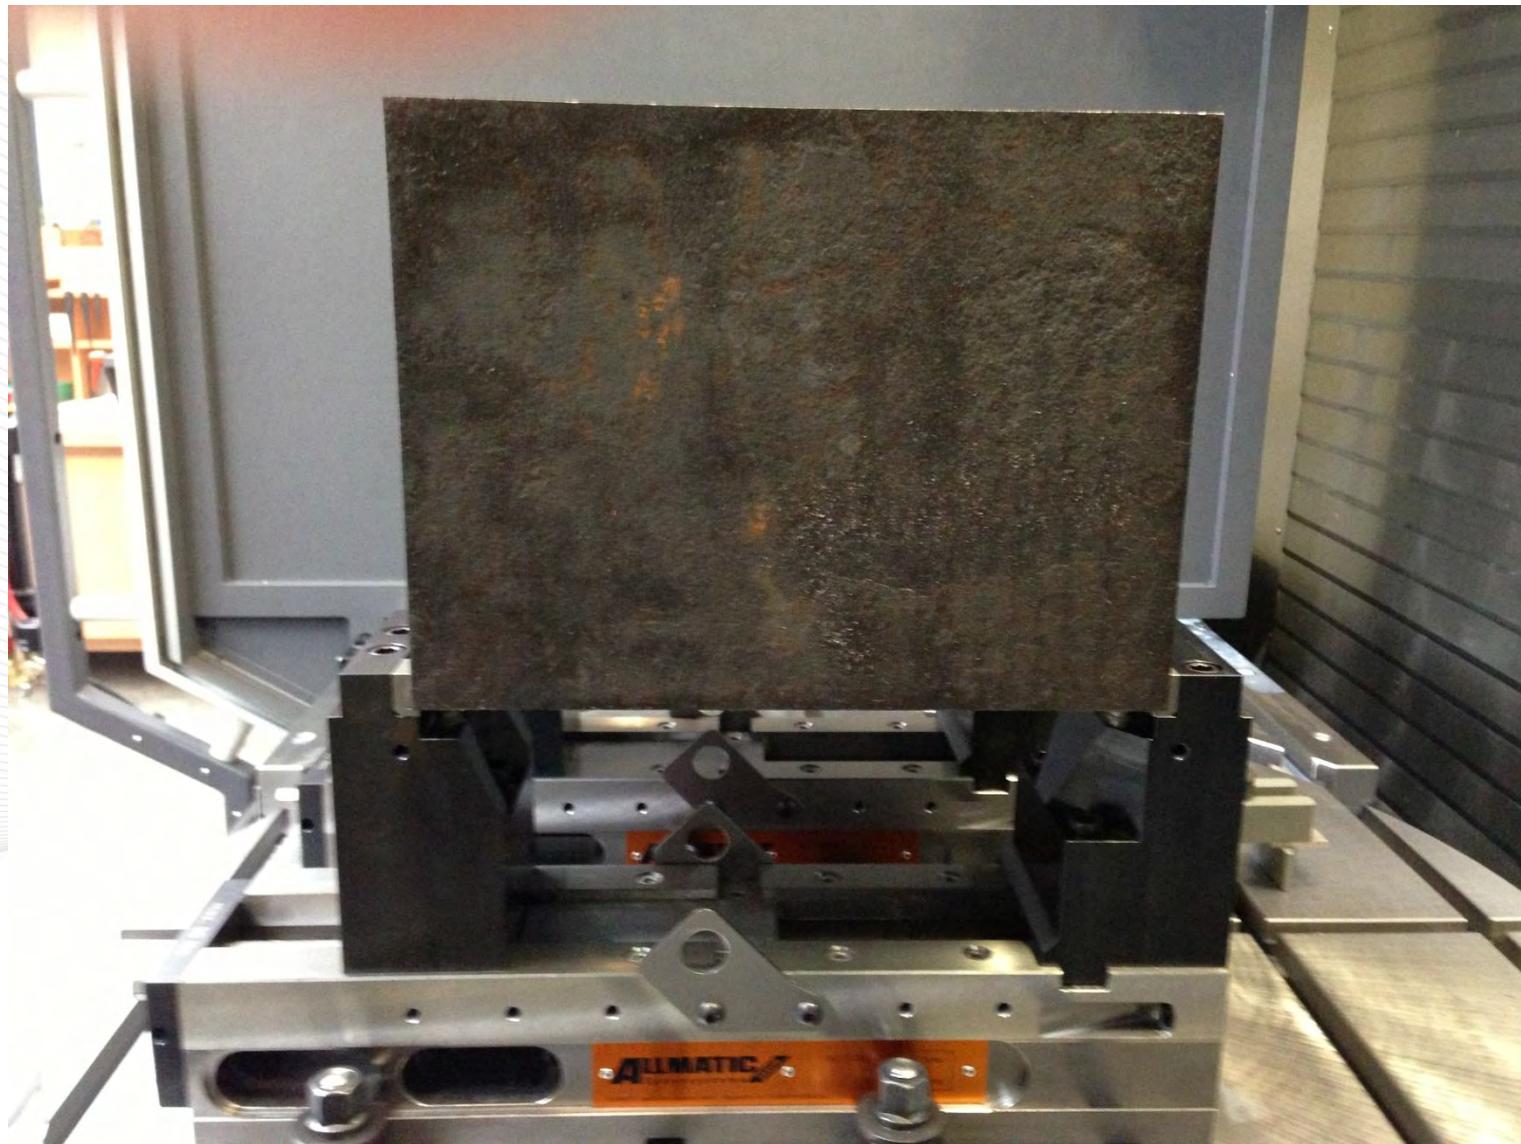

- clamp always to the fixed jaw = everytime the same 0 - point
- workpiece is always in contact to the fixed jaw. High stability and **no** movement = 'twisting' of the workpiece during machining
- limited clamping accuracy of the workpiece caused by irregular lifting of the jaws (mainly in the 2 operation)

- workpiece is always in the center (tolerance + / - 0,01 mm)
- workpiece is clamped floating, therefore sensitive to vibrations and 'twisting' during machining
- excellent parallelism of the workpiece; nearly identical lifting of the jaws

# New generation Titan 2

**ALLMATIC**  
Spannsysteme JAKOB

Griptechnologie and new generation

## market situation:

- machine tool:  
the trend to 5 – axis machine tools is constantly increasing
- operator:  
universal clamping device; clamping of rough and premilled workpieces
- clamping device:  
requirements increase (flexibility, accuracy.....)

# Griptechnologie and new generation

- nearly 70 % of all Allmatic- vices are size 125 mm
- new vice available in 3 lenghts

- Titan 2 K – für 5- side milling
- Titan 2 M – universal vice
- Titan 2 L – for big workpieces

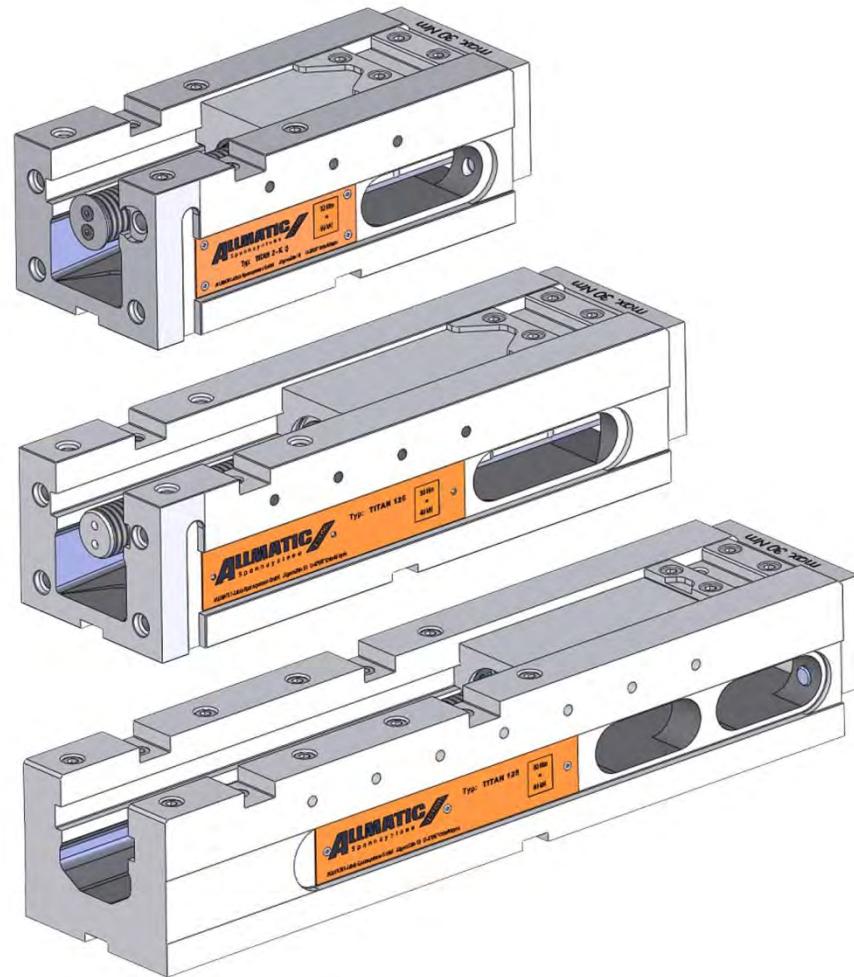

# Griptechnologie and new generation

Titan 2 K and 2 M are equipped as standard to fit with a vice extension; at Titan 2 L on request possible (reworking of the base)

Gressel Grepos 5 X  
extension 100 mm und  
250 mm

# Universal vice Titan 2

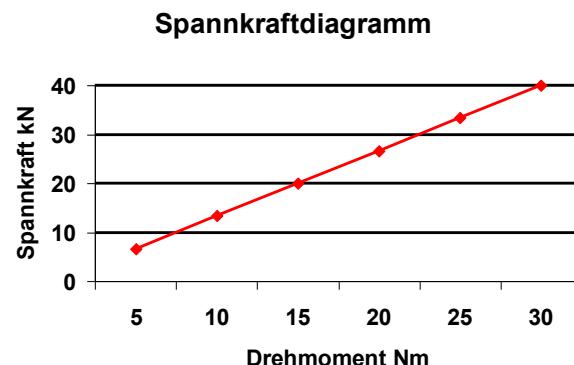

## operation:

- with adjustable torque wrench (6 – 30 Nm)
- rotation angle to get the maximum clamping pressure is less than 270°

## Clamping pressure:

- maximum clamping pressure approx. 40 kN  
(torque 30 Nm)

# Universal vice Titan 2

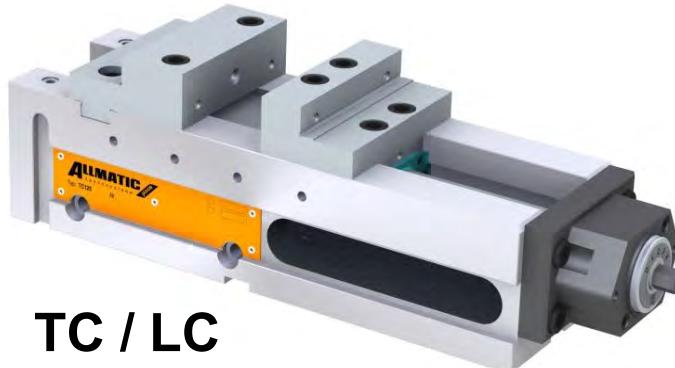

**Titan 2**

conventional clamping

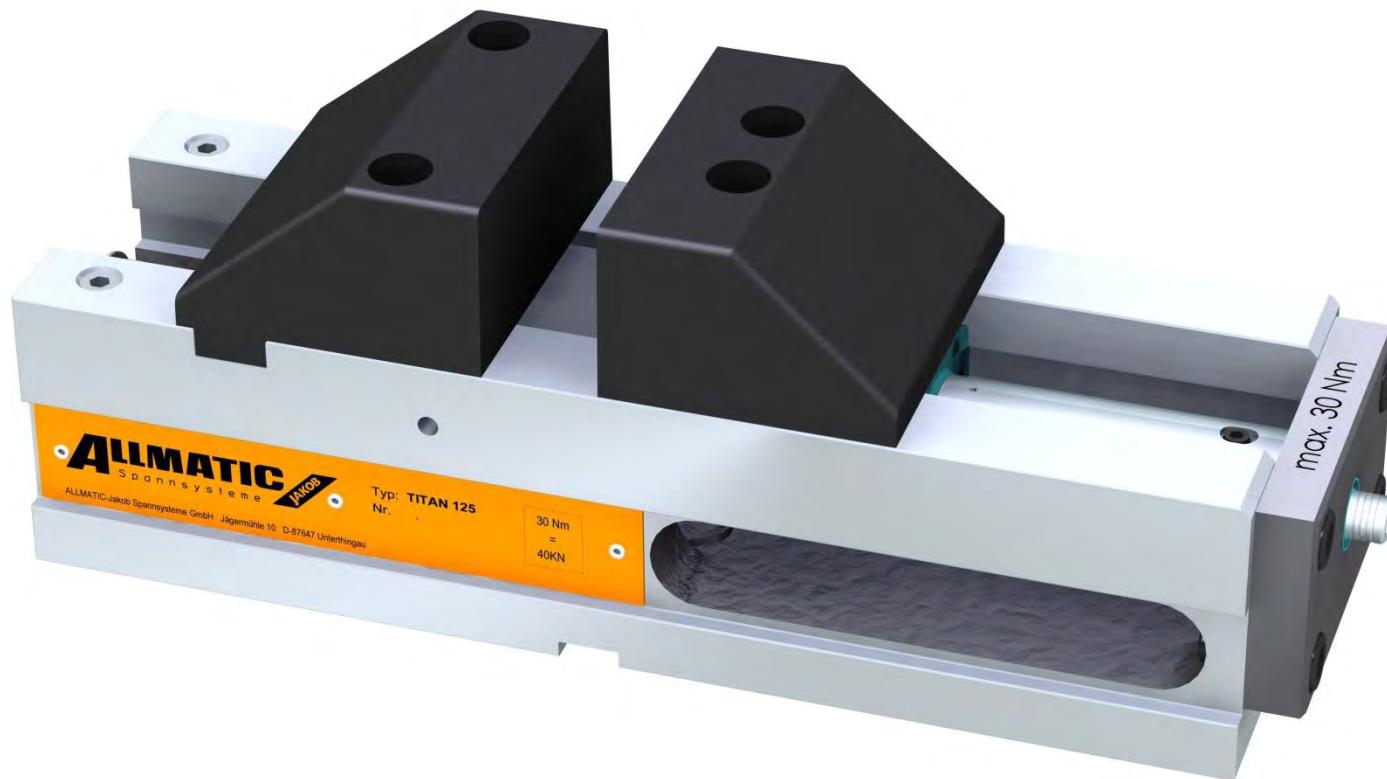

grip clamping

**TC / LC**

# Conventional clamping of workpieces

**ALLMATIC**  
Spannsysteme  
JAKOB

# Grip clamping

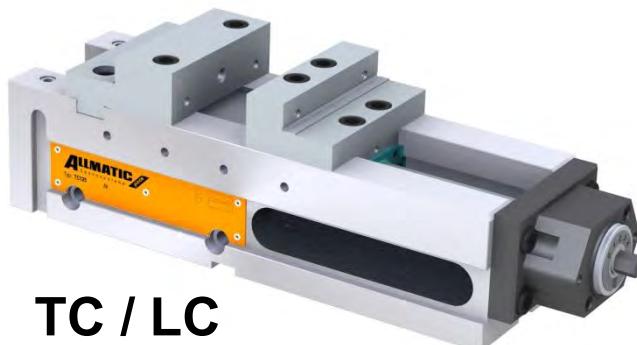

# Griptechnologie and new vice generation

All jaws of the single vices – not DUO – built since year 1998 are exchangeable and does fit to the new generation

**Titan 1**

**TC / LC**

**Titan 2**

# Mechanical power intensifier Titan 2 K, M, L

**ALLMATIC**  
Spannsysteme JAKOB

- pure mechanical
- power stroke 3,8 mm
- maintenance free

# Griptechnologie and new vice generation

note: the power stroke at TC/LC is approx. 1,0 mm, other manufacturers do have sometimes less than 1 mm

What is the reason, that Allmatic had developed a complete new high pressure spindel ?

→ Solely because of clamping rough workpieces

Using the rough workpiece clamping function the clamping safety essential depends from the contact areas between the teeth of the grip-studs and the workpiece. Deeper marks = clamping safety is better.

# Griptechnologie and new vice generation

Clamping result:

Titan 2

Grepos 5X, TC/LC

Clamping pressure:  
Titan 2: ca. 40 kN  
Grepos: ca. 20 kN

# Competition grip- vices

- power stroke 3,8 mm
- torque max. 30 Nm

Pictures from Gressel system  
are removed copyright reason

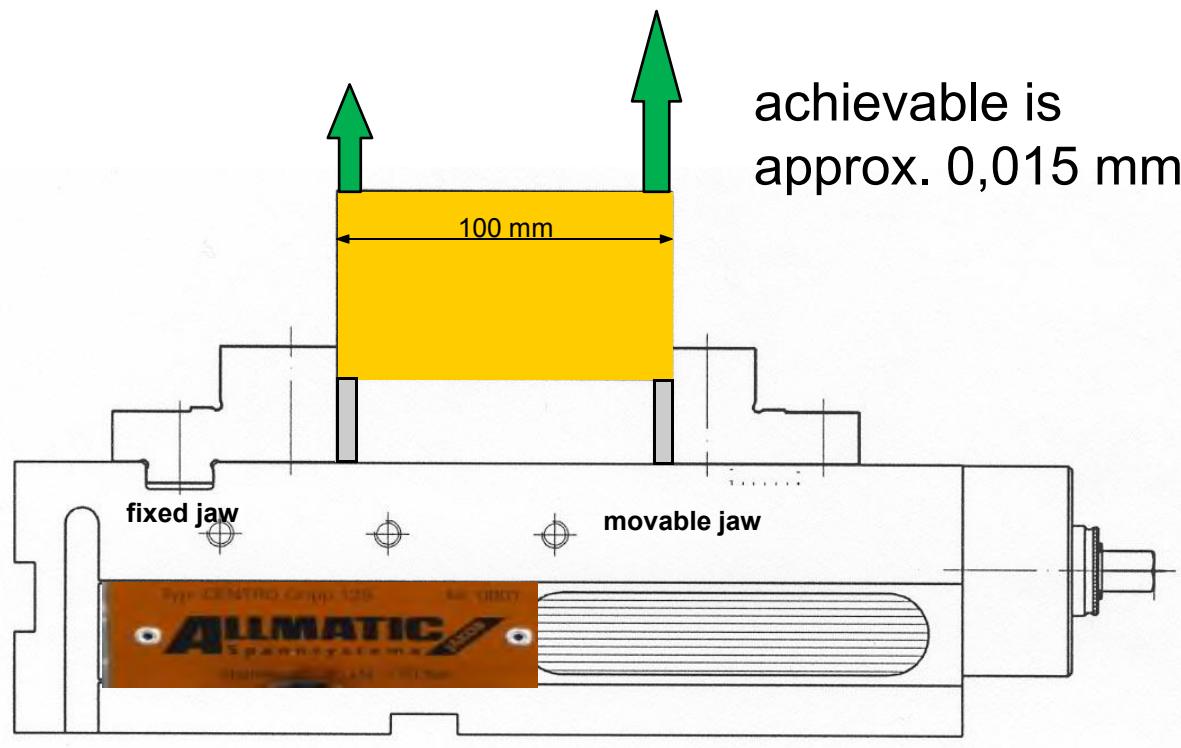

- power stroke approx. 0,8 mm
- Torque approx. 55 - 60 Nm

# Griptechologie and new vice generation

Clamping accuracy:

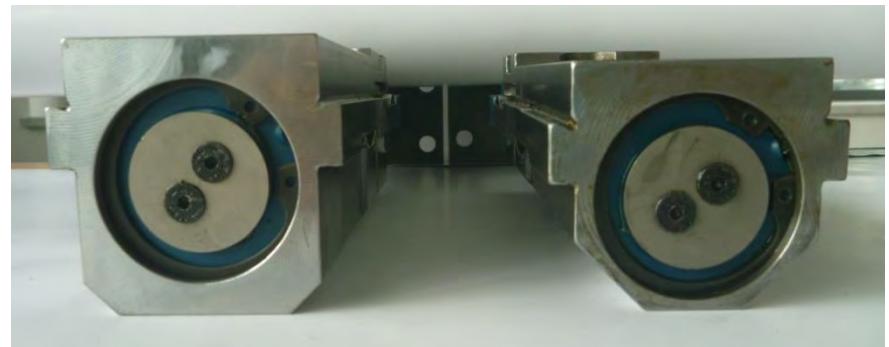

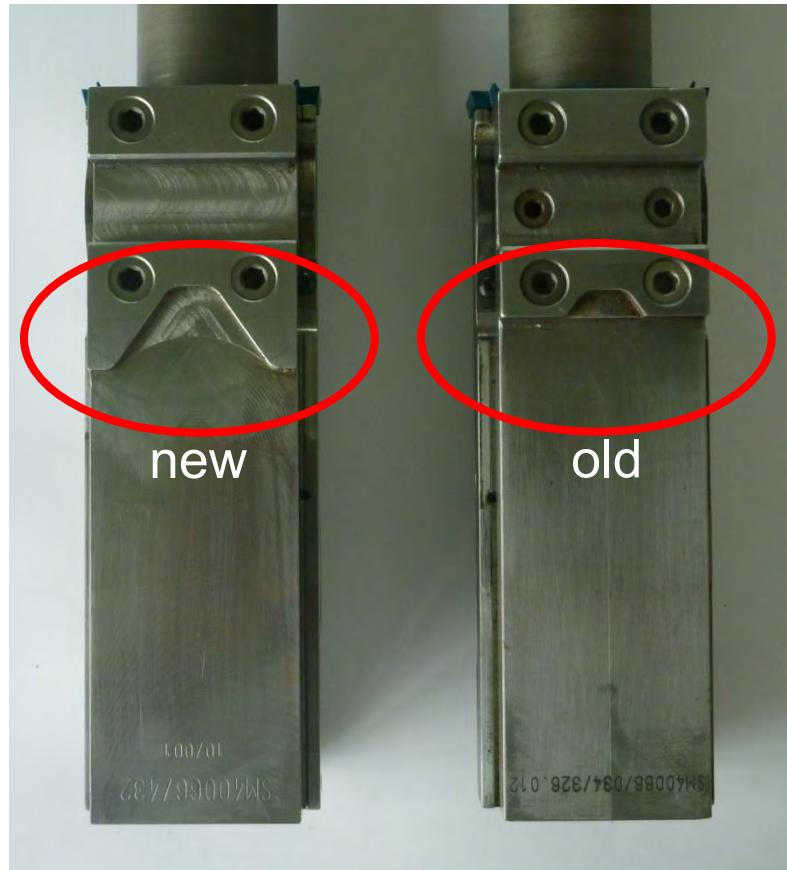

Operators accept normally a parallelism of 0,02 mm/ 100 mm (at maximum clamping pressure, workpiece sits on parallels)

# Griptechnologie and new vice generation

better accuracy with new spindle nut and improved base

important for service:

new spindle nuts does **not** fit into base of 'old' TC/LC/Titan 1vices

# Griptechologie and new vice generation

important = fault in catalogue !!!

clic – jaws does not anymore fit to Titan 2 K, M, L,

(will fit in near future again – we are working on it)

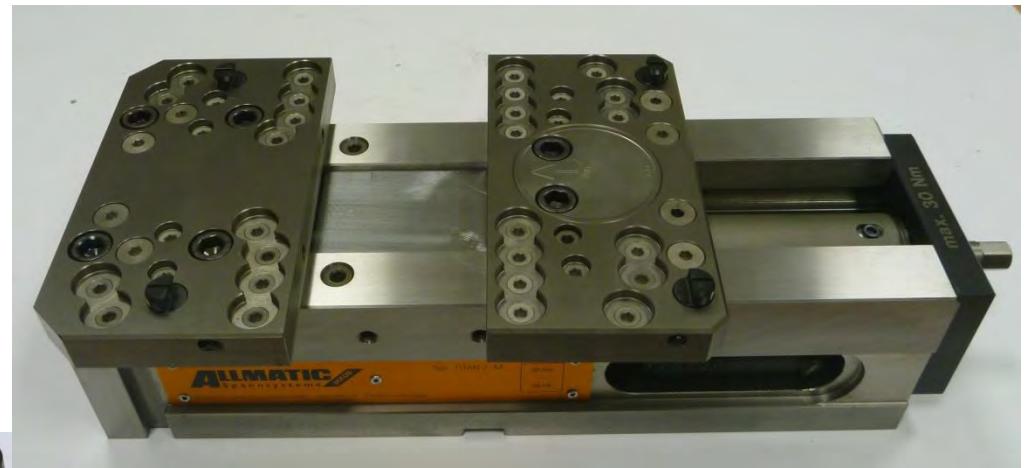

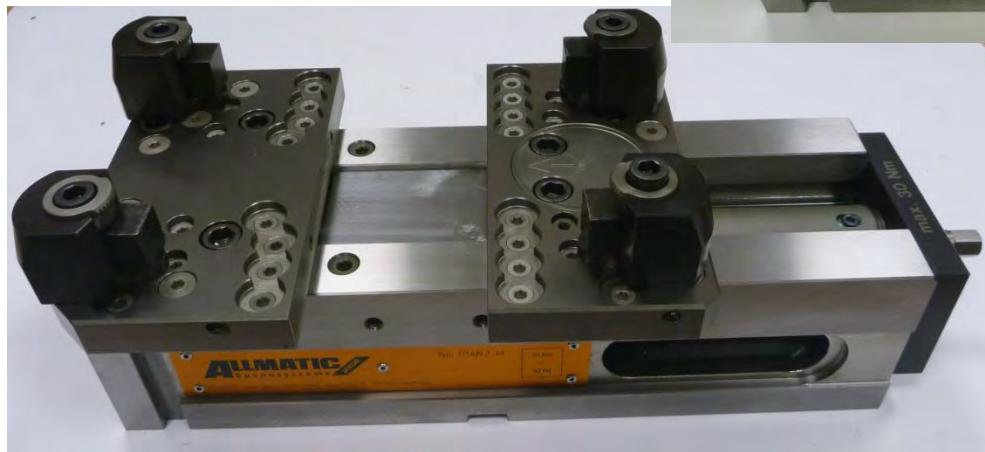

# Griptechnologie and new vice generation

## Grip – jaws new generation

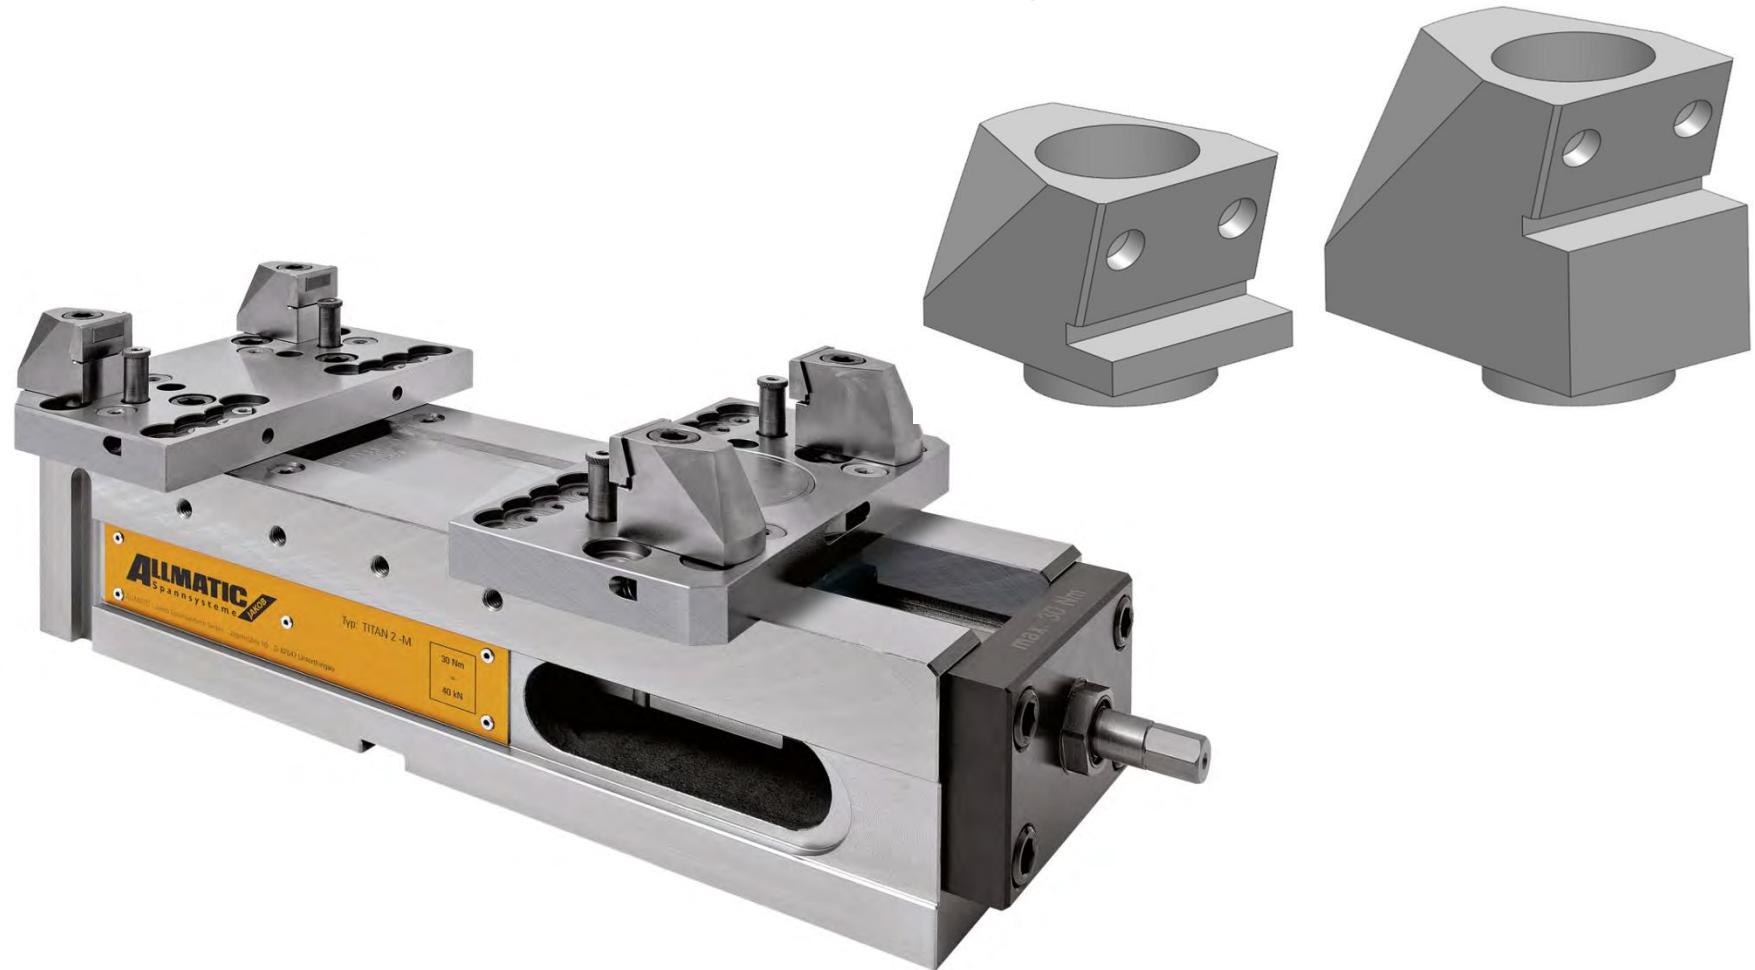

all grip – studs and universal grip- set remain in our range of products

# Griptechnologie and new vice generation

New: pull down elements available in 2 heights

# Griptechnologie and new vice generation

## function pull down elements

changeable grip inserts – different versions – are clicked in front of the adapter and are held with 2 magnetic pins. By the wedge the workpieces will be pulled downwards to the supporting surface of the base or to ground support pins. Minimum clamping depth: 8 mm

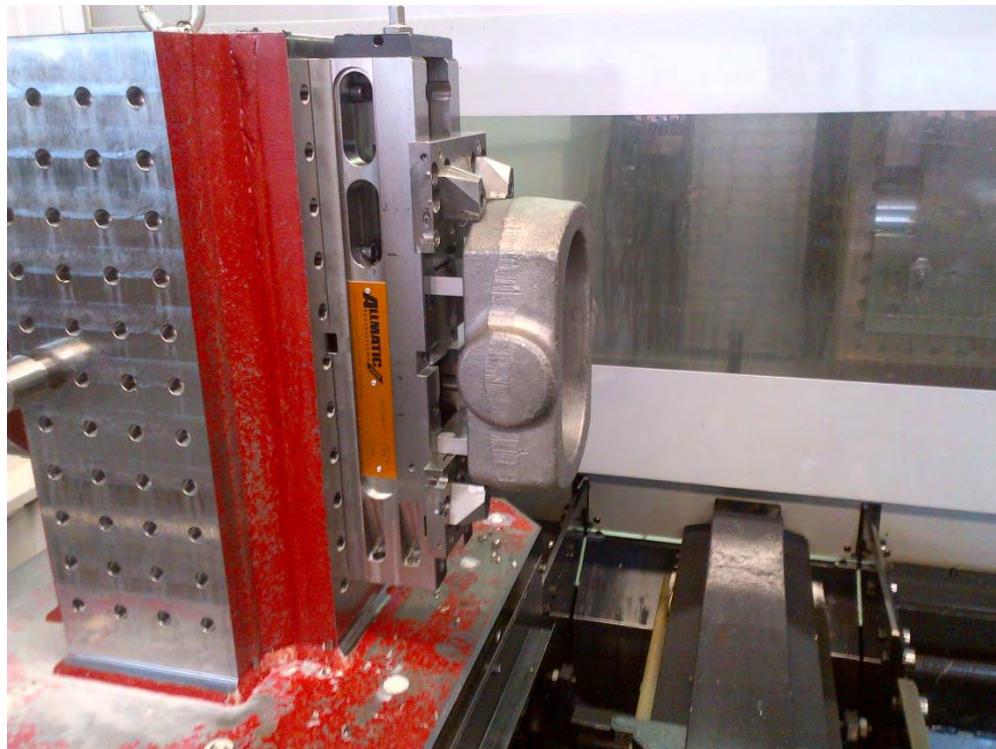

# Griptechnologie and new vice generation

Function pull down element - advantage:

Workpiece sits nearly parallel to the machine table and is clamped secure mostly without causing vibrations during machining – independant of clamping rough material or premilled parallel workpieces.

# Griptechnologie and new vice generation

ground support pins (screwed into the support jaws) give the contact to the supporting surface of the base. A mounted rubber thread sleeve in the support pins eliminates the lifting of the workpieces.

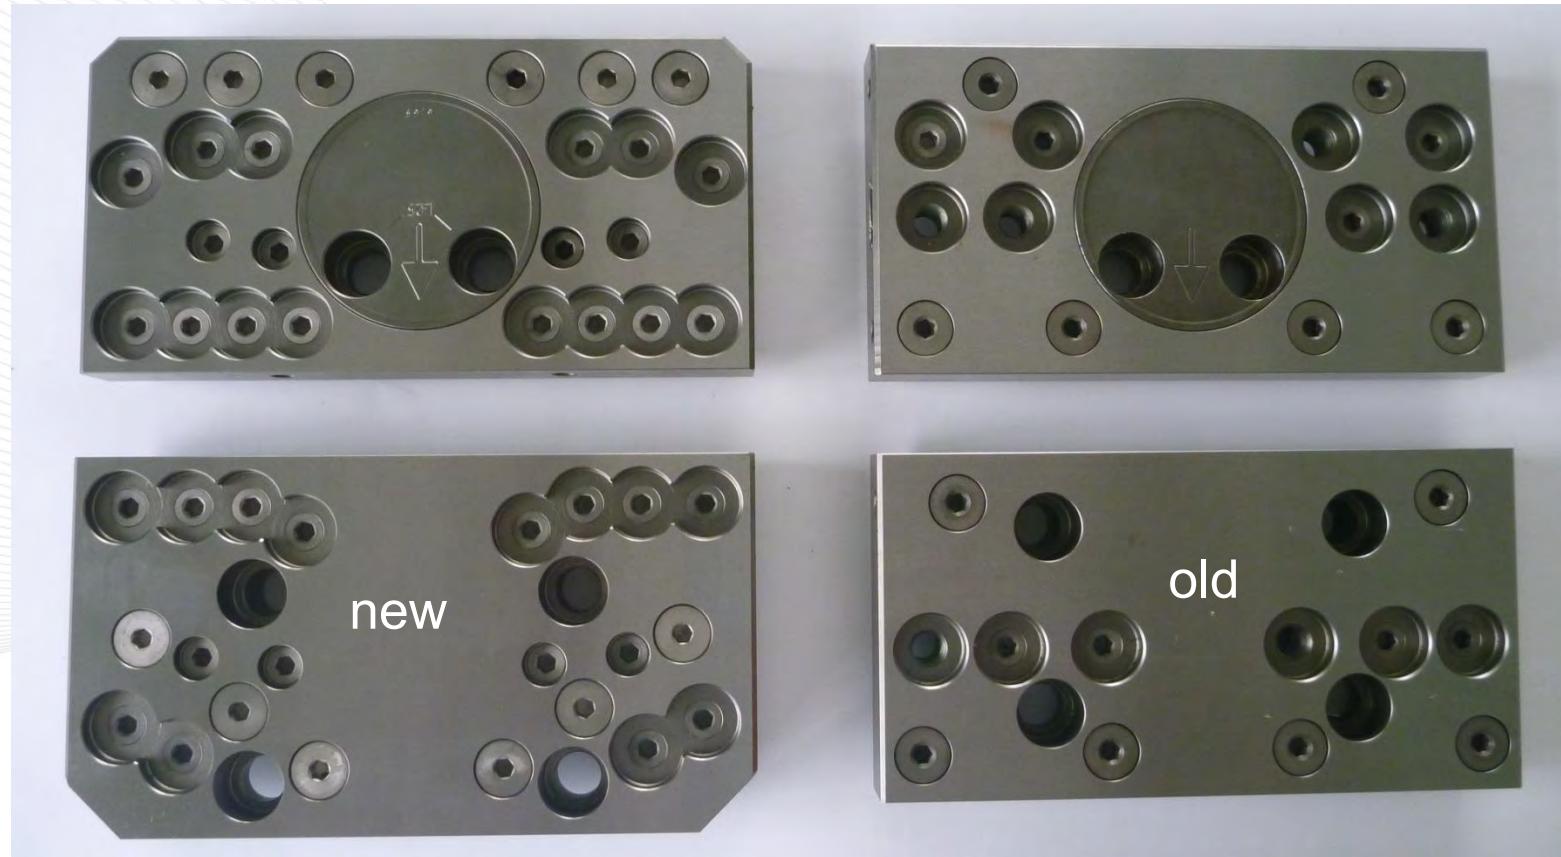

5 different heights: 23 mm , 29 mm, 34 mm, 43 mm , 48 mm

rubber sleeve

# Griptechnologie and new vice generation

note: support jaws old version (Titan 1) can only be used in combination with the pull down elements with restrictions (changed/additional holes)

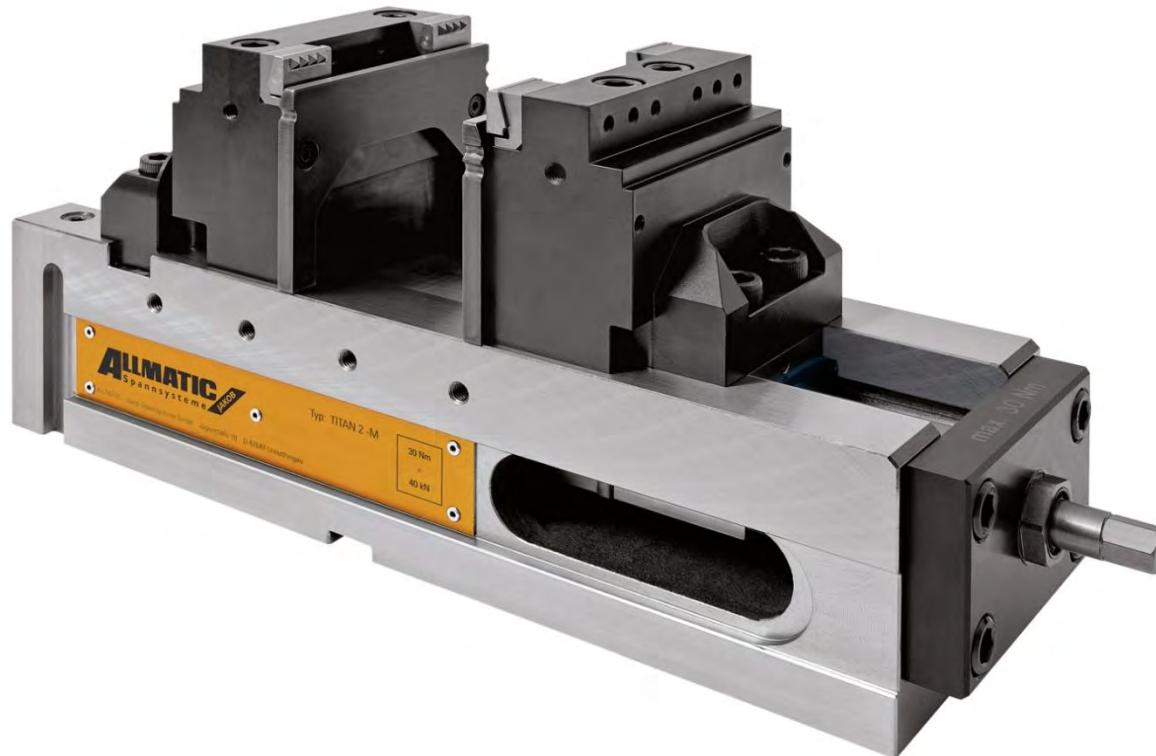

# Griptechnologie and new vice generation

application to 5 – axis machine tools

5- axis jaws can be assembled on all Titan 2 vices

# Griptechnologie and new vice generation

high jaws:

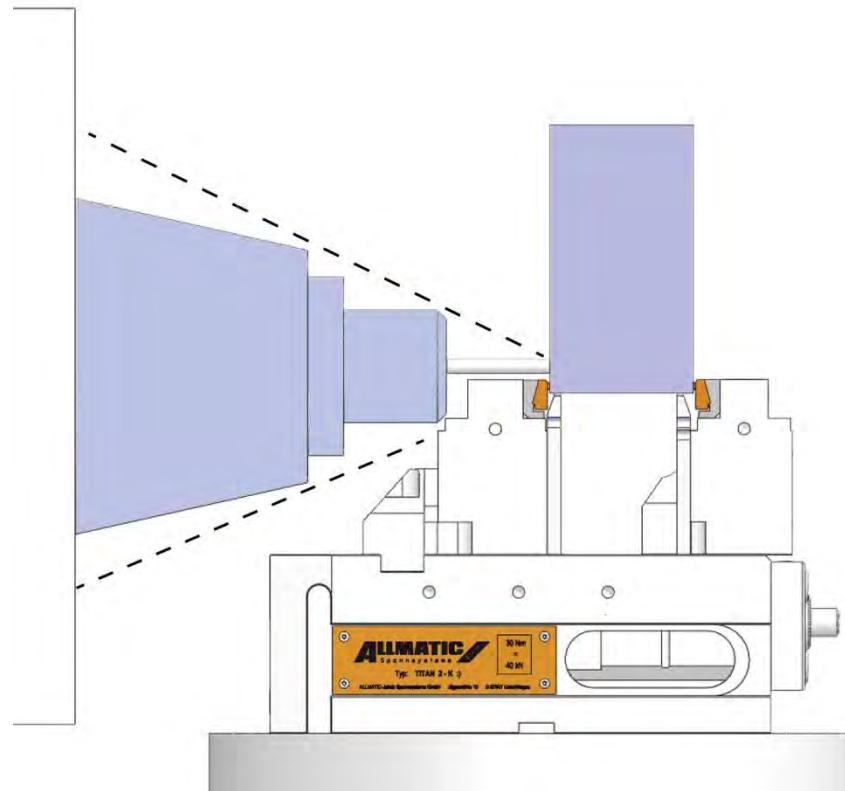

high jaws = big deflexion= loss of clamping pressure.  
Titan 2 power intensifier has big reserve

# Griptechnologie and new vice generation

The height of the jaws (97,5 mm) is selected in the following way, that the lifting of the jaws under pressure is as less as possible, but nevertheless a very good access to the workpiece is guaranteed. (short tools).

compromise:

- access
- stability
- holding force
- vibration

# Griptechnologie and new vice generation

application to 5 – axix machine tools

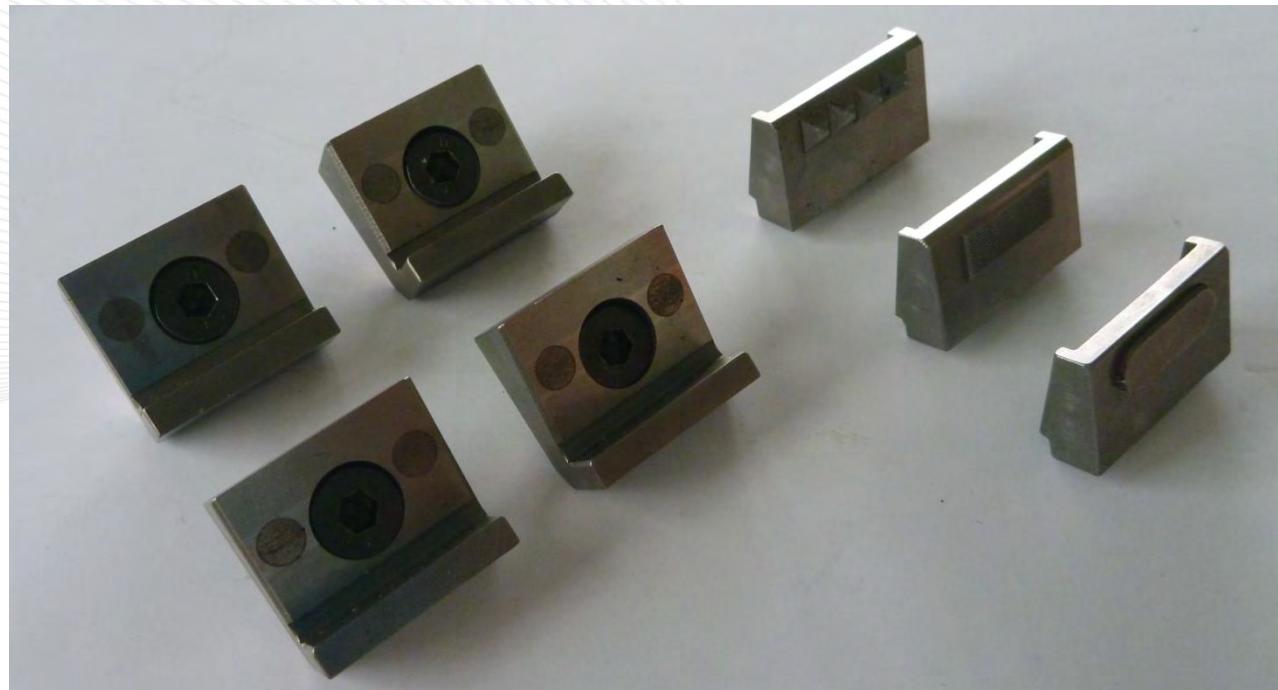

additional console (height 100 mm) is available for Titan 2 K und M

# Griptechnologie and new vice generation

4 wedge adapter are fitted to the high jaws bolted each with one screw; dependig of the workpieces – position more inside or outside.

Clicked grip wedge elements clamp and pull down the workpiece to the supports. Accuracy of 0,02 mm ist achievable. Supports available in height 70 mm, 85 mm, 90 mm.

- 4 teeth grip
- microgrip
- flat (diamond coated pads)

# Griptechnologie and new vice generation

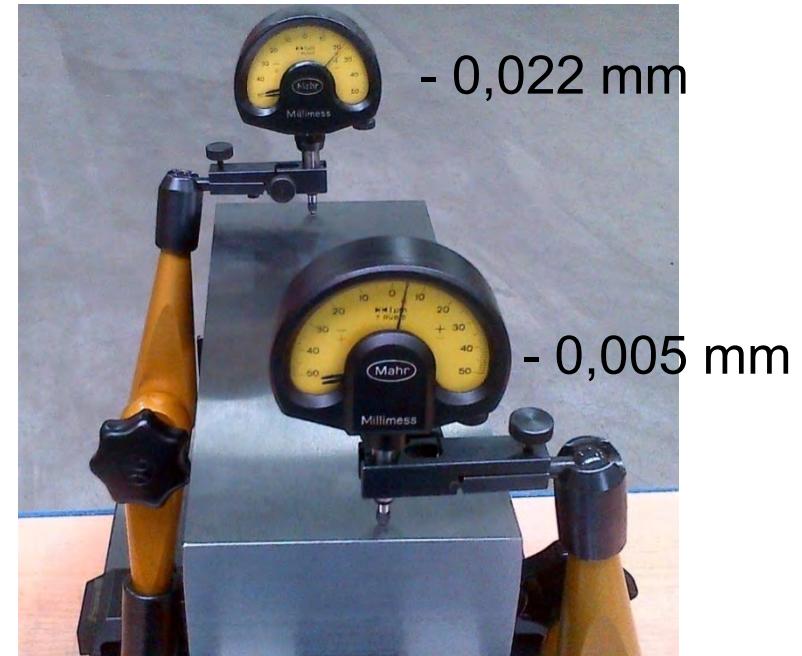

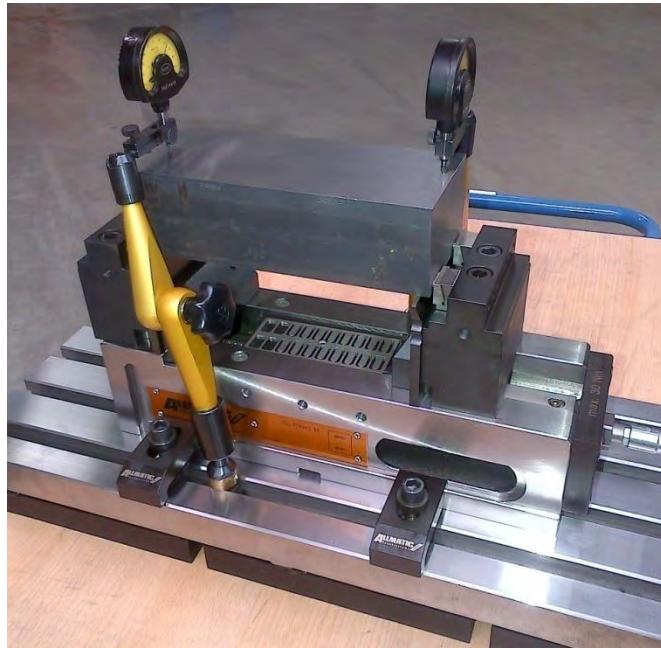

to clamp premilled workpieces we use diamond coated aluminum pads = designed as a wearing part. This works without a visible mark on the clamping area.

# Griptechnologie and new vice generation

wedge elements pull the workpiece downwards

# Griptechnologie and new vice generation

Complete set with selected items – packed in a stable case – is available

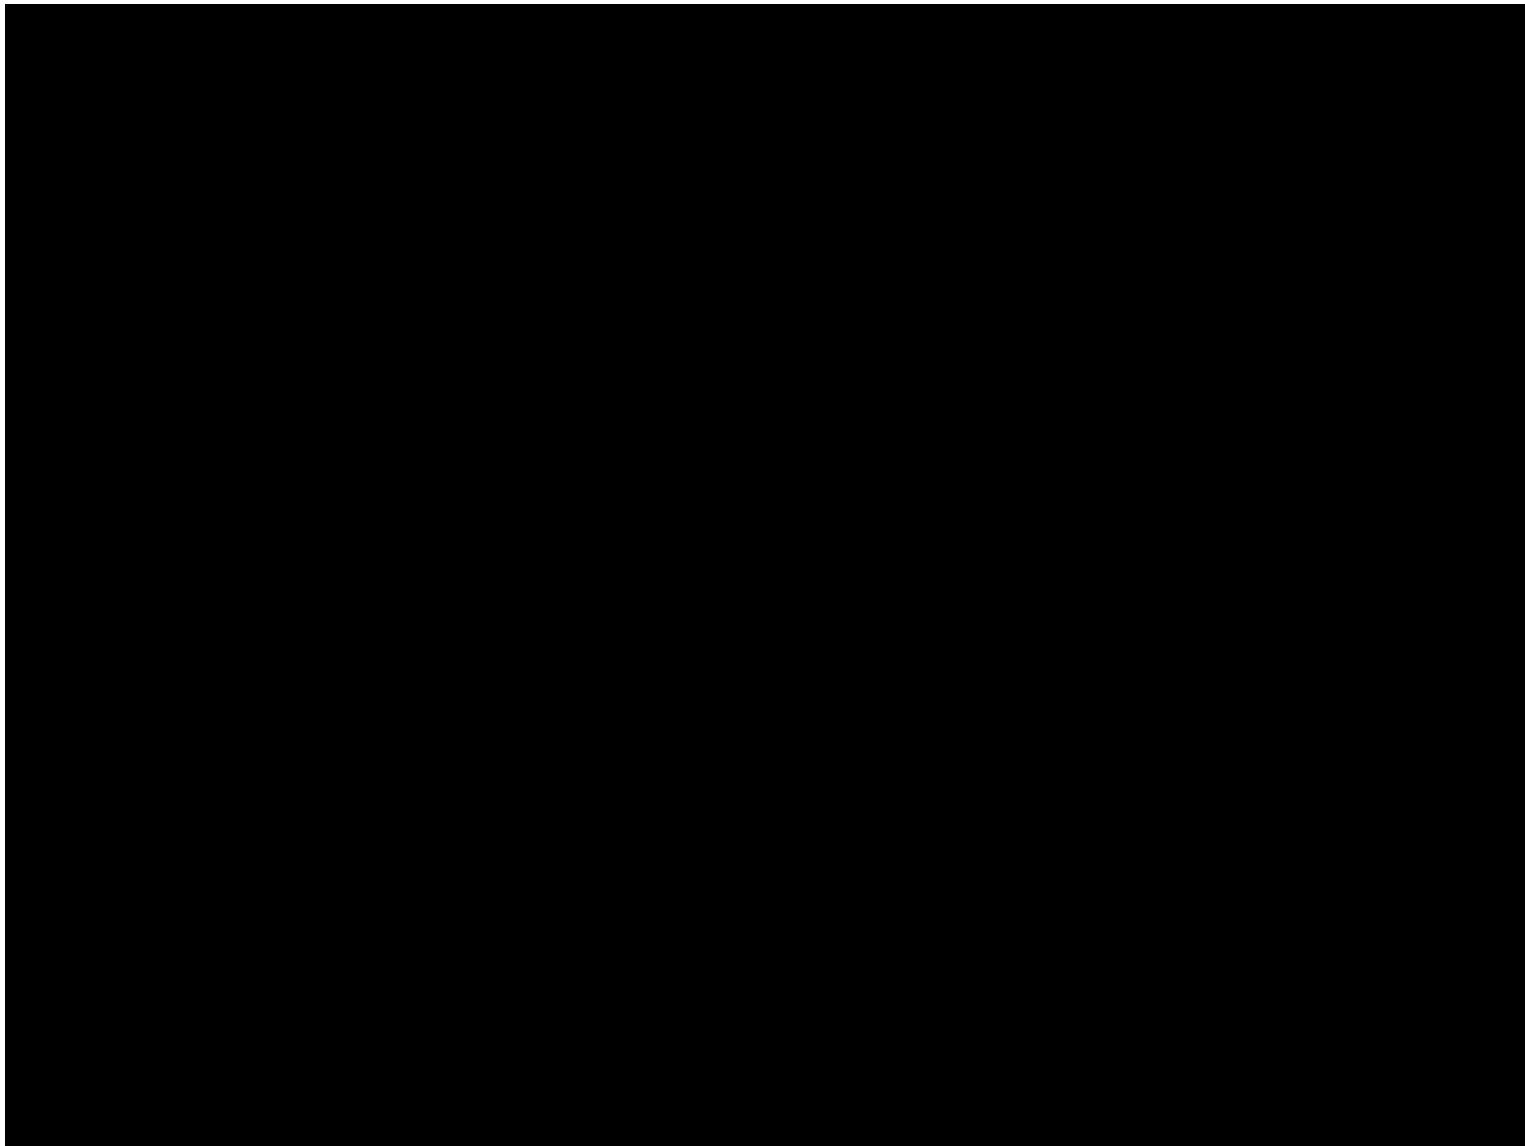

# Griptechnologie and new vice generation

If pull down is not necessary a reversible gripper strip is available.  
Each strip is fitted with 2 screws to the high 5 – sided jaw (4 pcs. are necessary to clamp 1 workpiece).  
Step 3 x 3 mm or 5 x 3 mm (height x width). Suitable **only** for workpieces with a rough surface (accuracy)

# Example of use

## 5 – axis vice

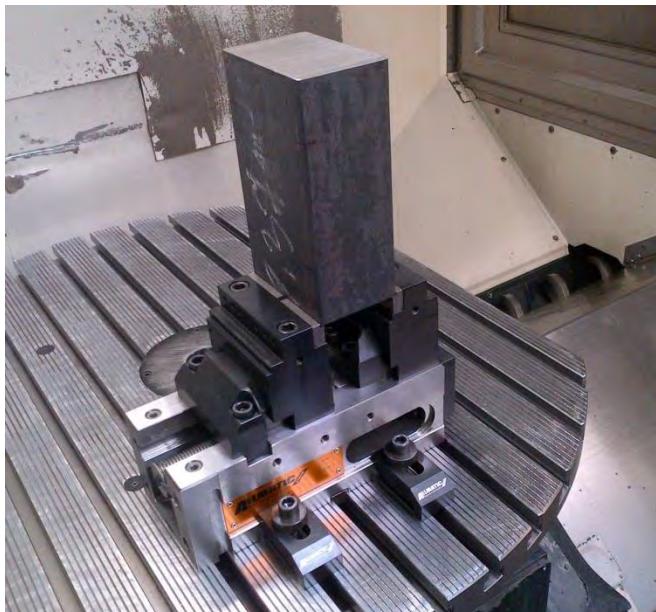

Titan 2 K, BB 125 mm,  
height 197,5 mm

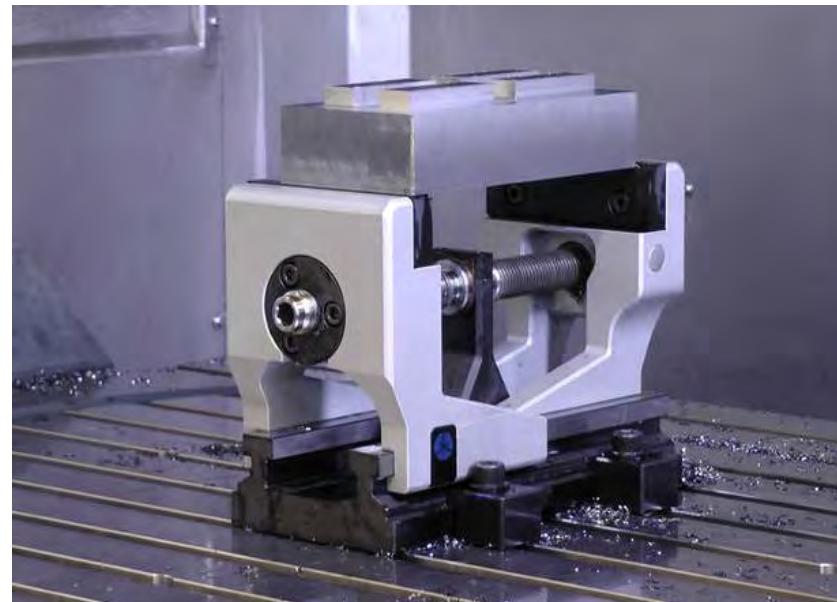

Kipp Zentrischspanner BB 90 und 125 mm,  
height 170 mm
